slow-radio / baseline / hover — PASS

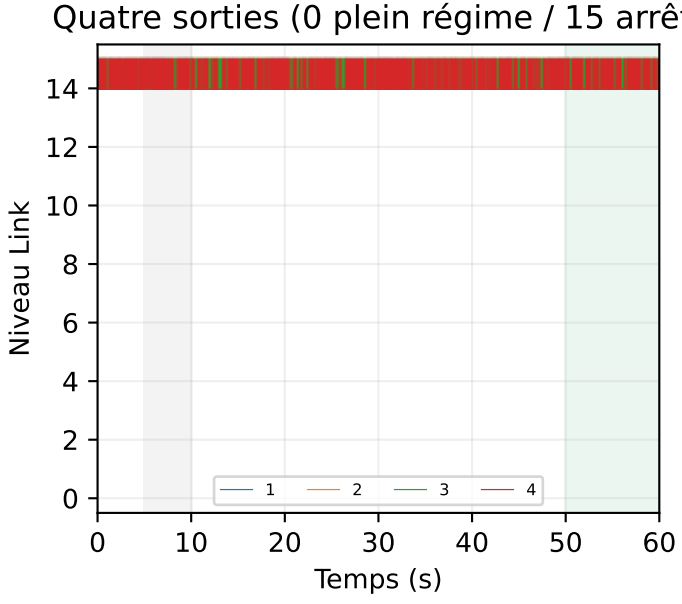

Maintien sans touche pendant toute la simulation.

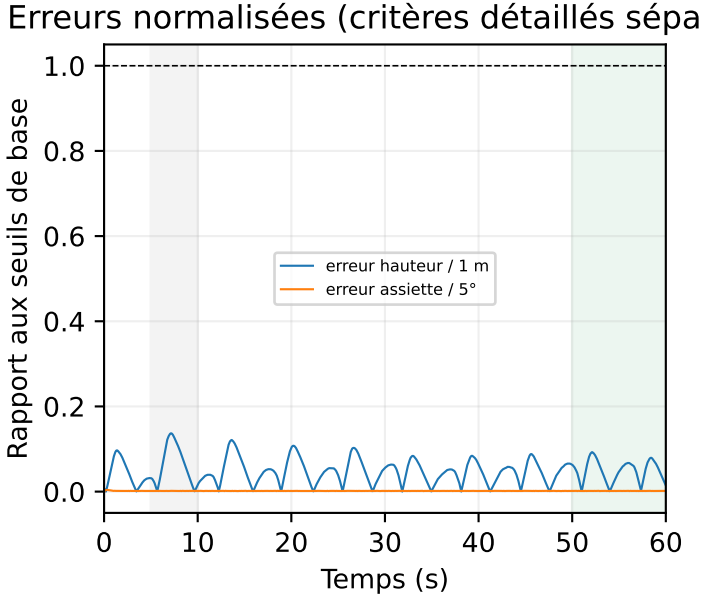

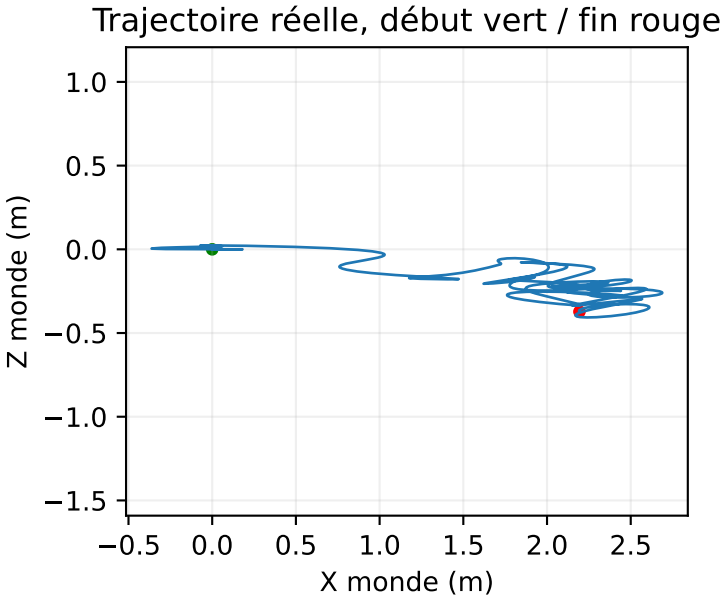

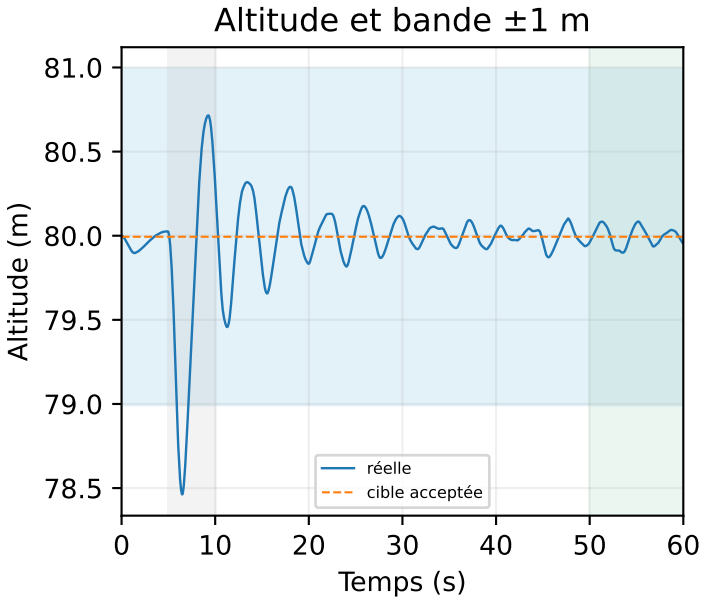

Erreur finale hauteur 0.014 m ; excursion finale 0.160 m ; assiette finale max 0.000° ; freinage — s. Critères échoués : aucun.

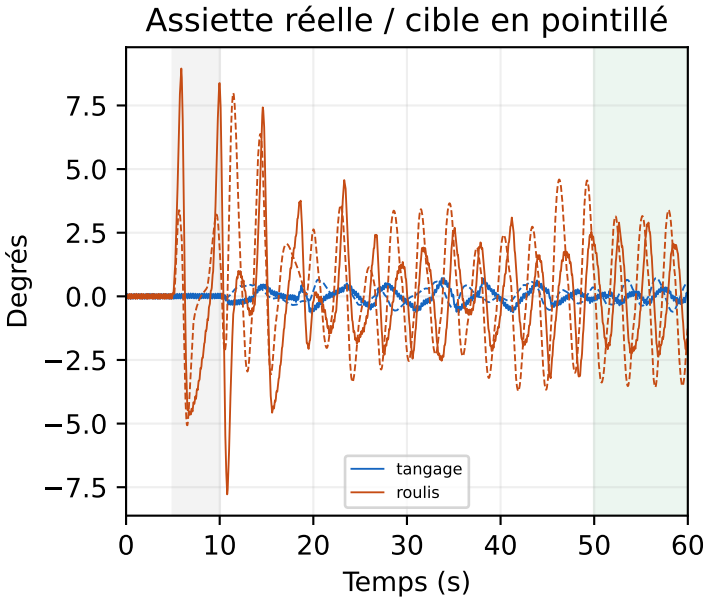

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

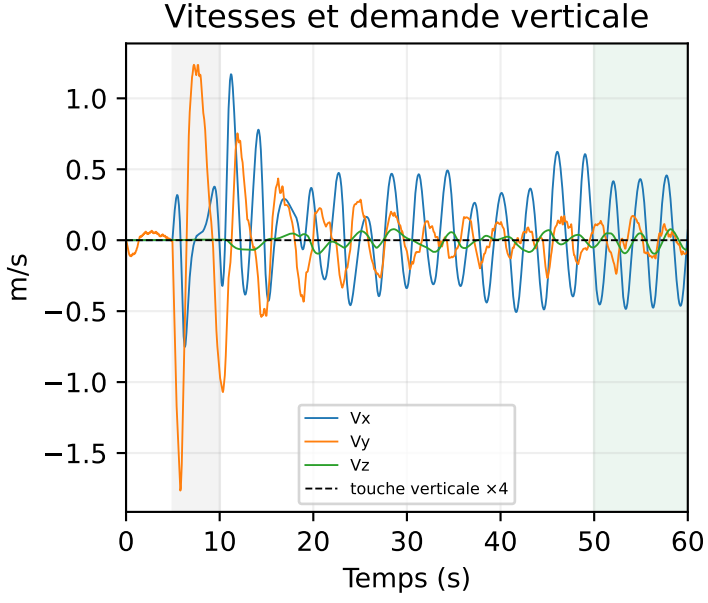

slow-radio / baseline / load-swing — PASS

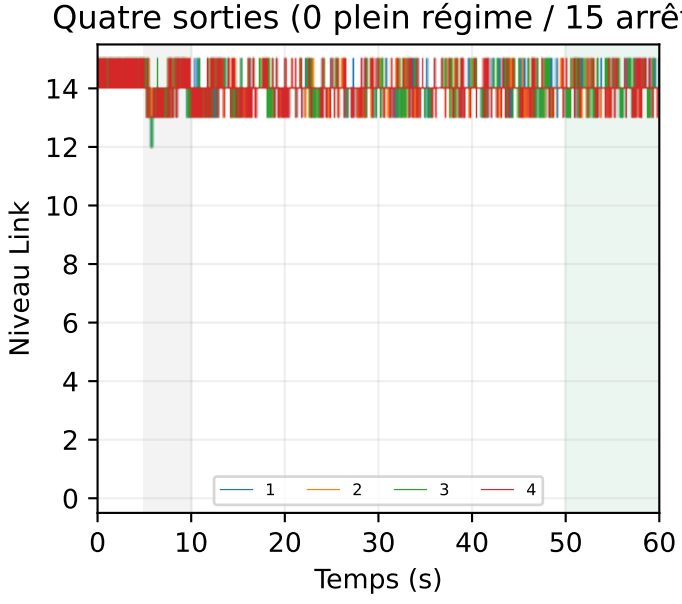

Aucune touche ; charge ponctuelle de 12 kg sur corde 5 m, inclinée initialement de 20°, ajoutée à 5 s.

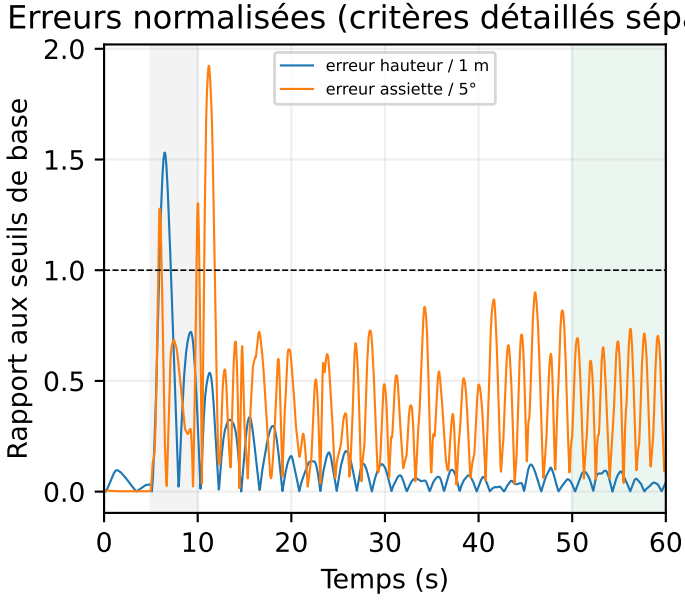

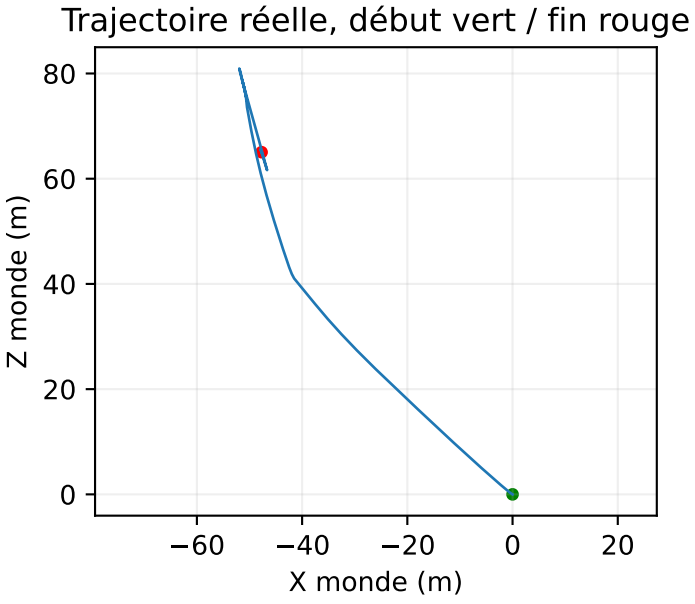

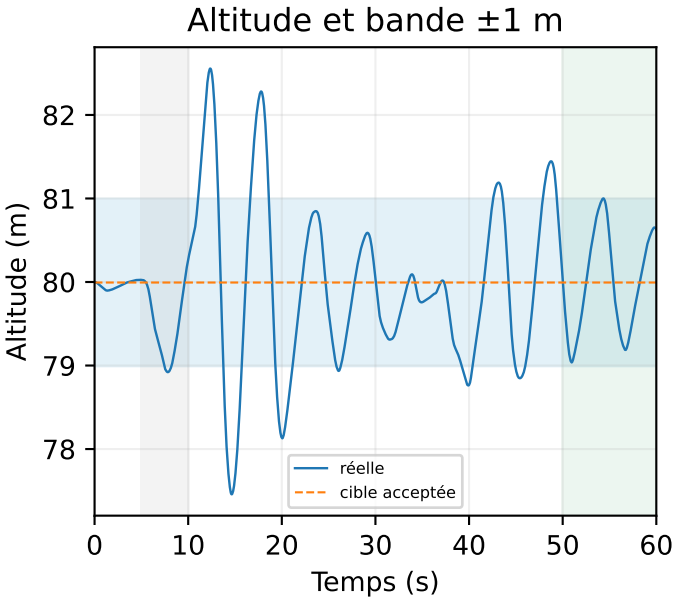

Erreur finale hauteur 0.042 m ; excursion finale 0.186 m ; assiette finale max 2.873° ; freinage — s. Critères échoués : aucun.

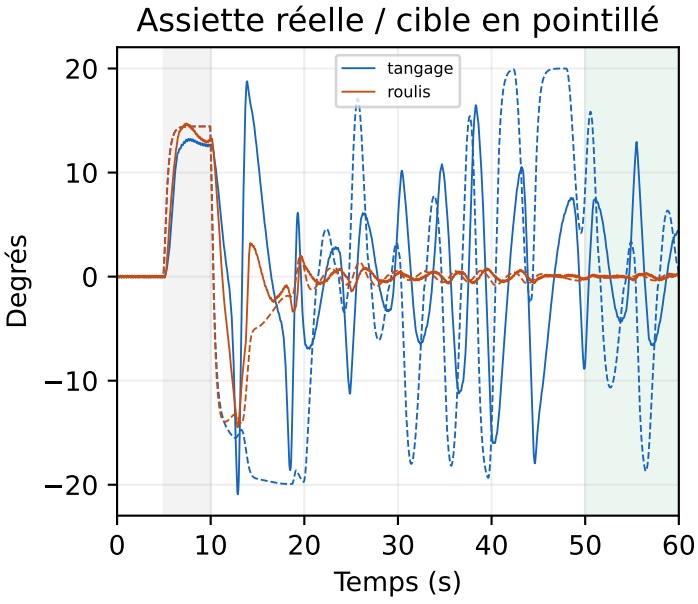

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

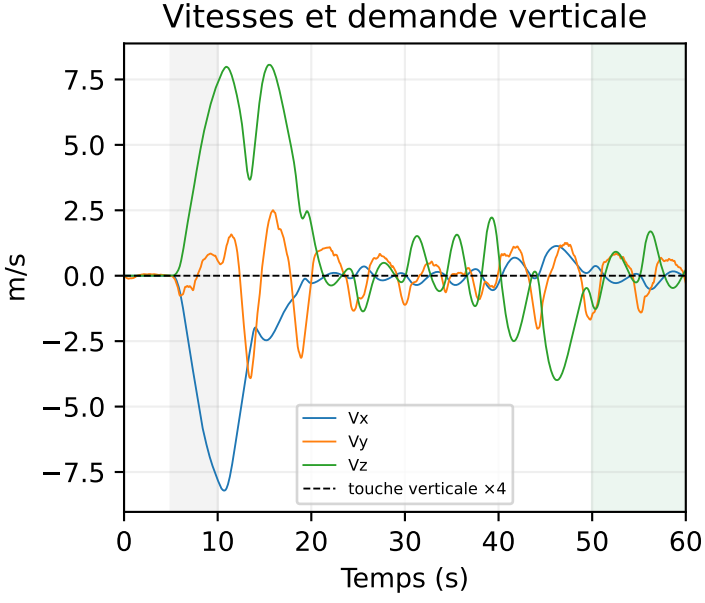

slow-radio / baseline / forward-left — FAIL

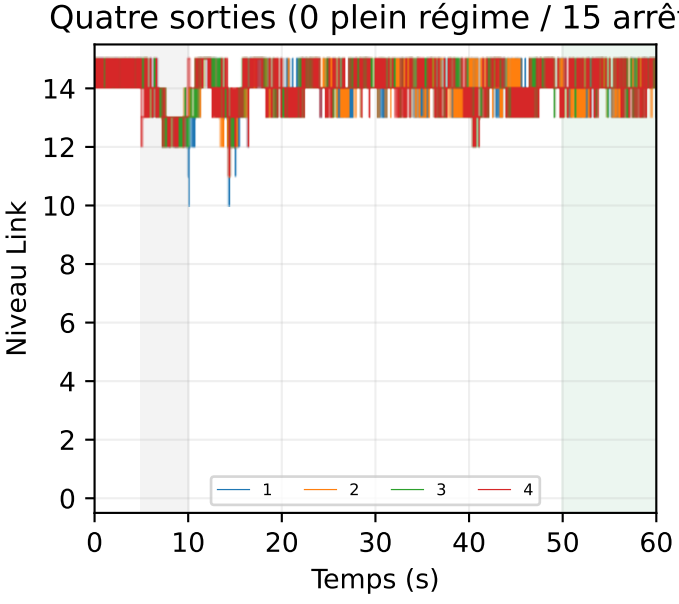

W+Q entre 5 et 10 s, mode déplacement latéral.

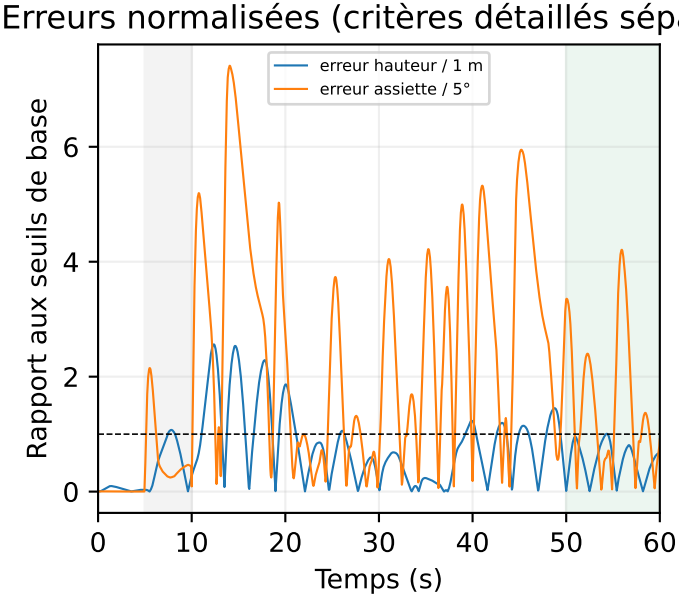

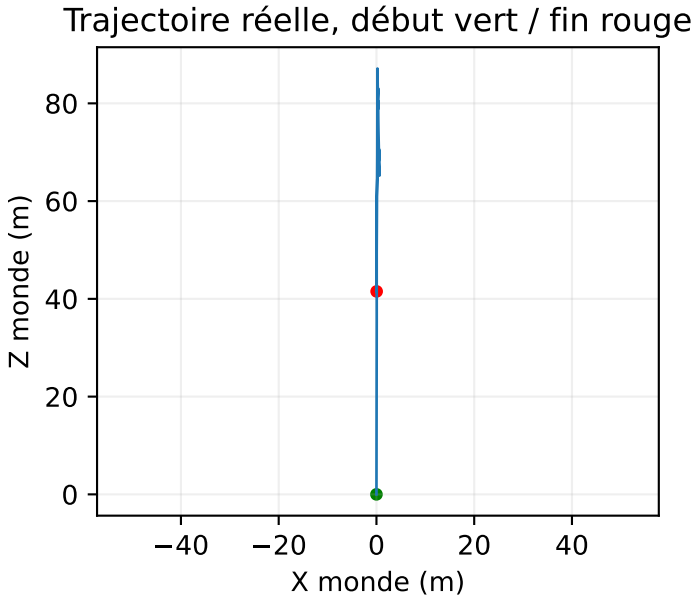

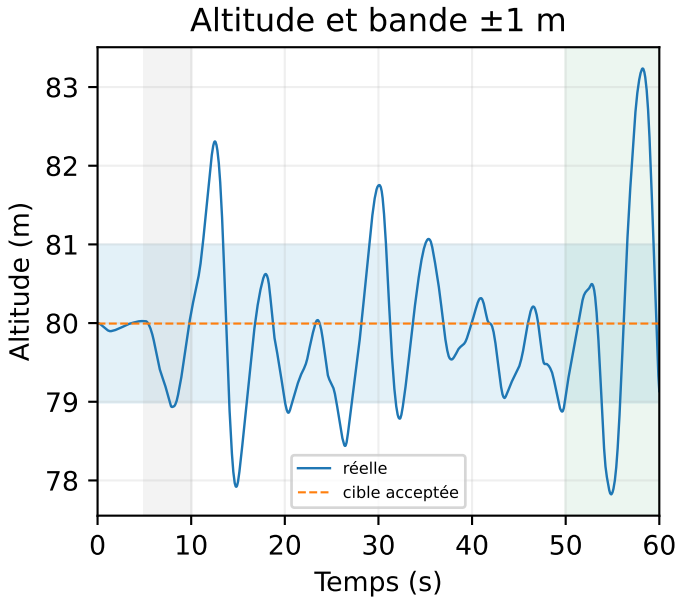

Erreur finale hauteur 0.634 m ; excursion finale 1.964 m ; assiette finale max 12.865° ; freinage 13.350 s. Critères échoués : tail_height_peak, tail_height_rms, tail_height_span, tail_tilt, tail_speed_rms, final_speed, transient_height, active_height, braking.

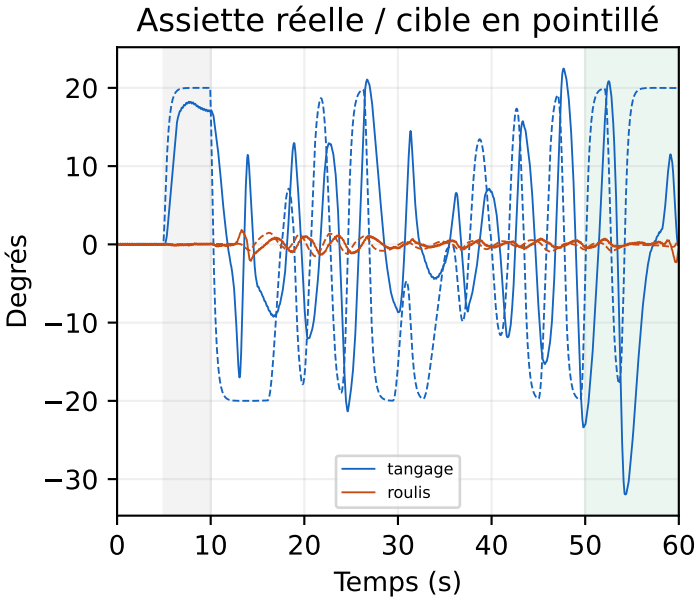

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

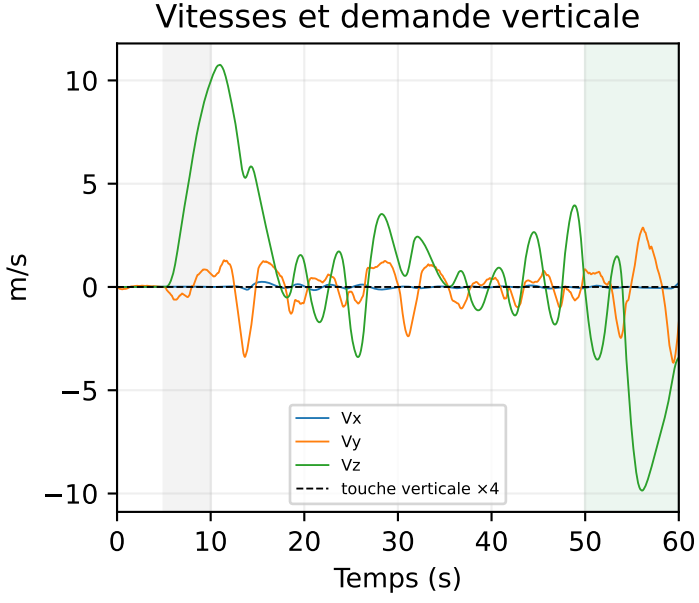

slow-radio / baseline / brake — FAIL

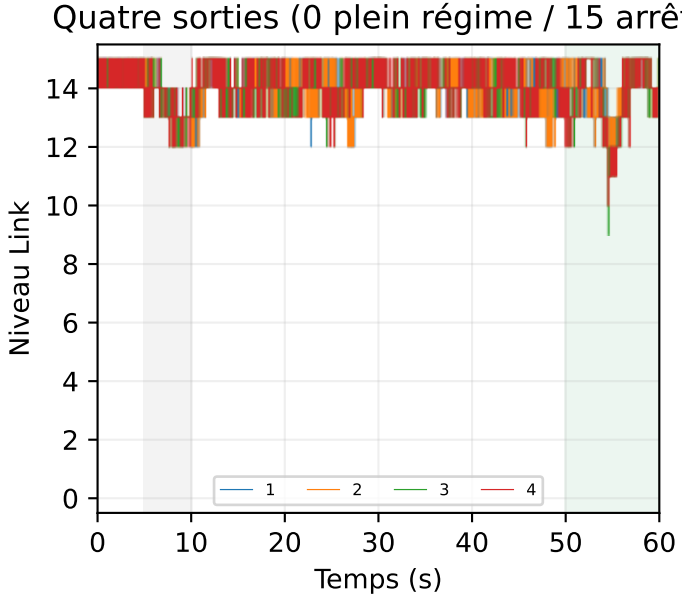

W de 5 à 10 s, relâchement, délai de freinage mesuré sur 15 observations consécutives.

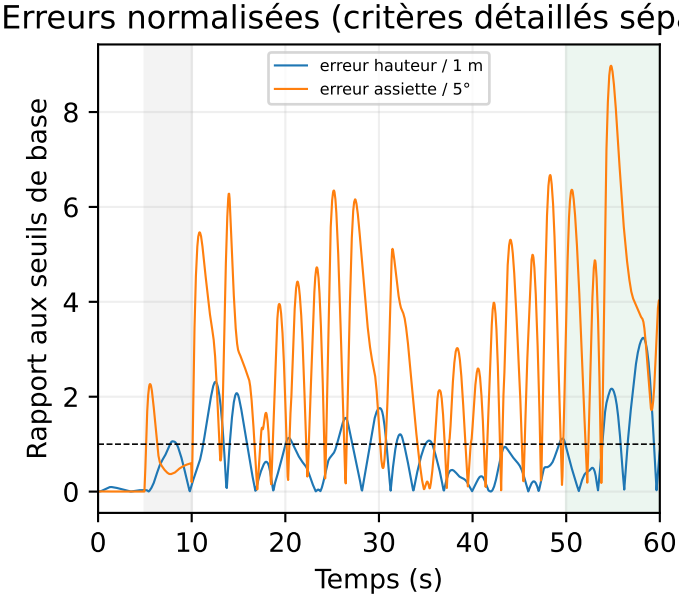

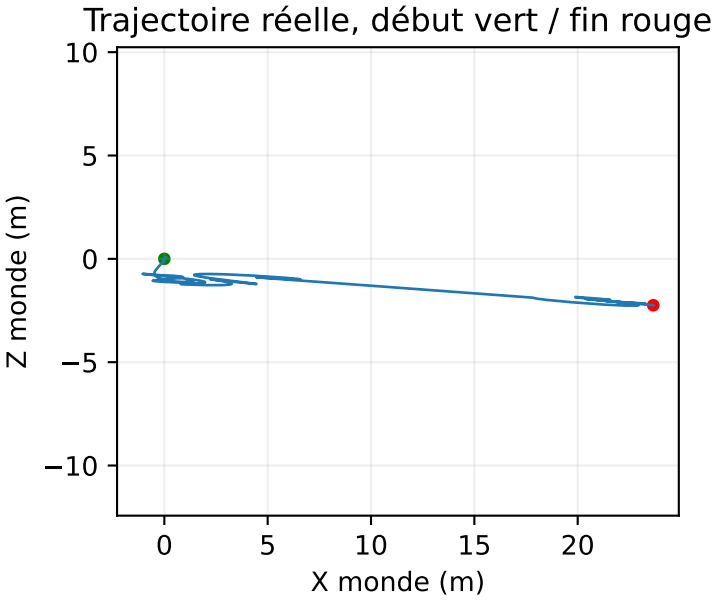

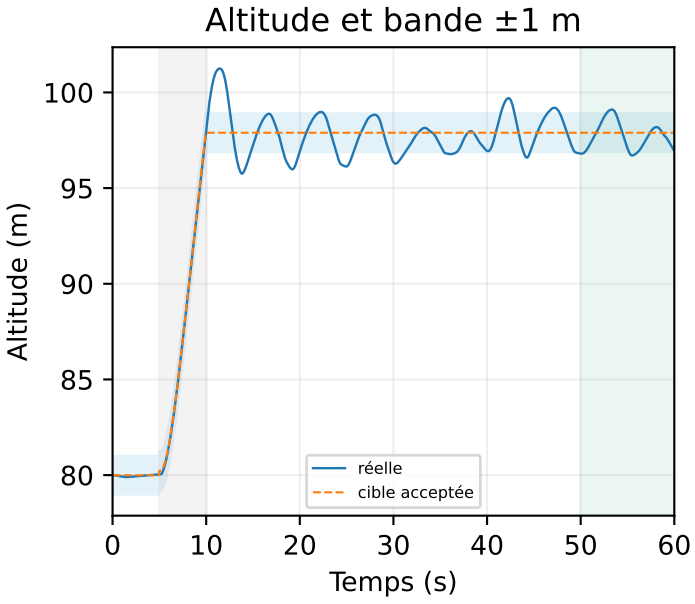

Erreur finale hauteur 0.859 m ; excursion finale 5.413 m ; assiette finale max 32.038° ; freinage 25.450 s. Critères échoués : tail_height_peak, tail_height_rms, tail_height_span, tail_tilt, tail_speed_rms, final_speed, transient_height, active_height, braking.

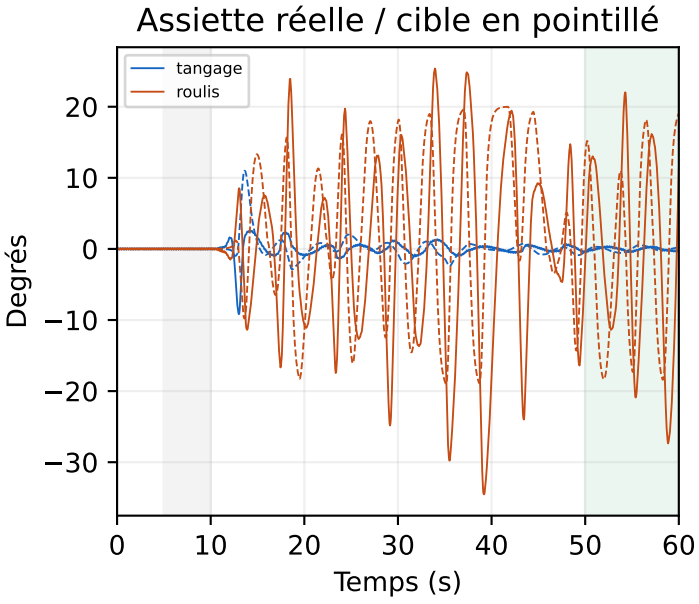

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

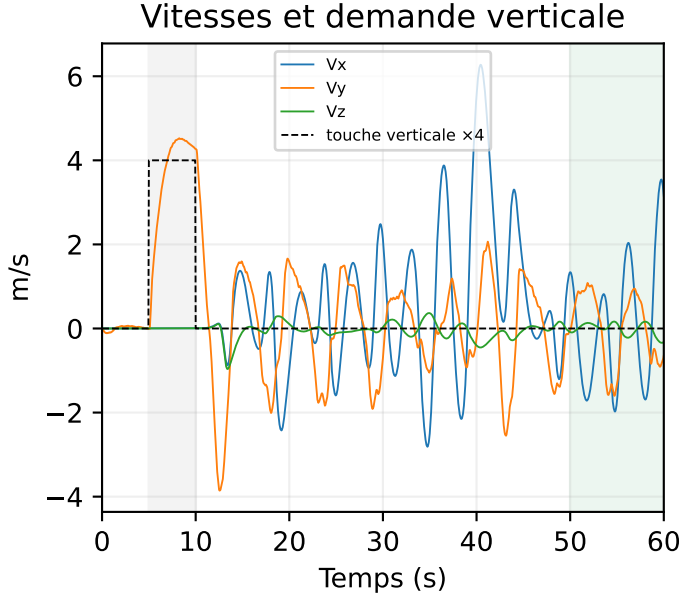

slow-radio / baseline / climb — FAIL

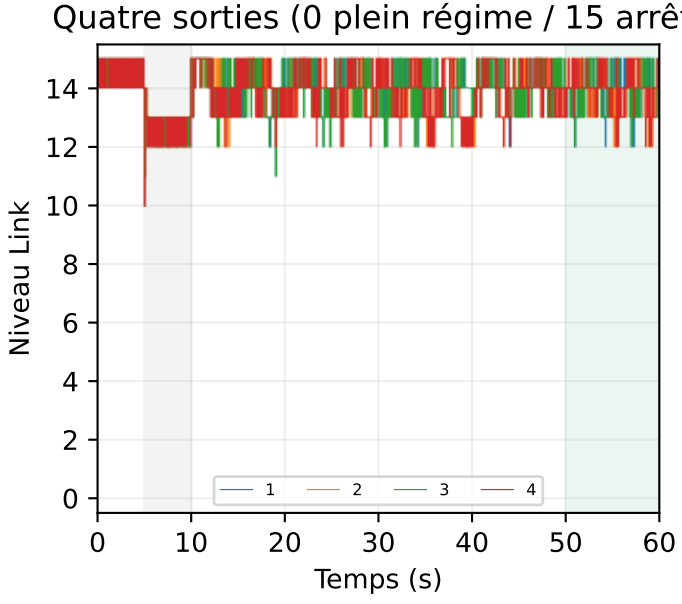

Espace entre 5 et 10 s, puis relâchement et maintien de la hauteur atteinte.

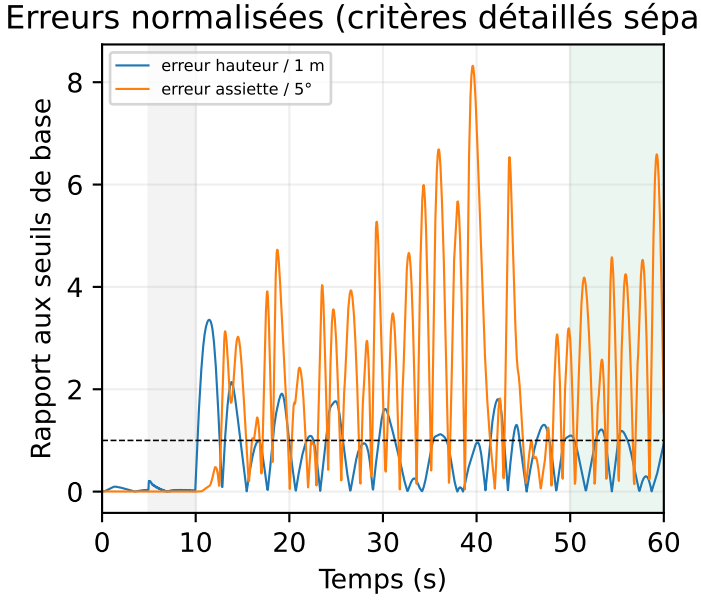

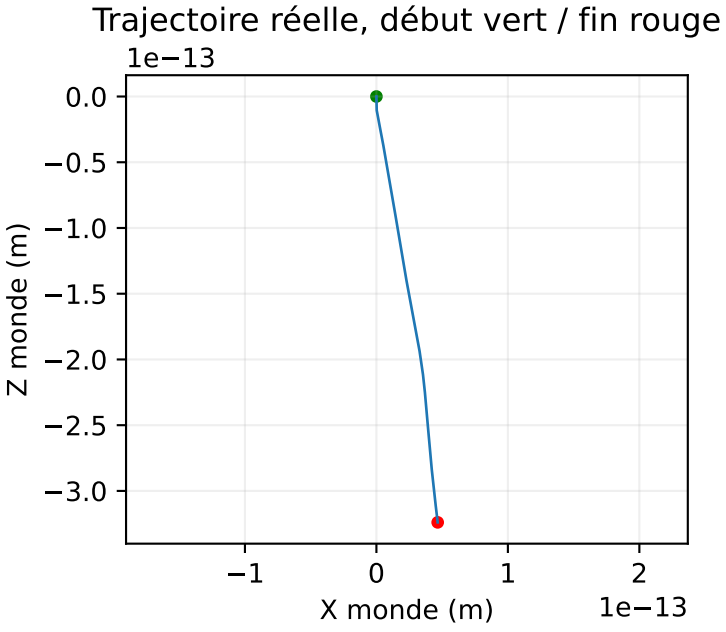

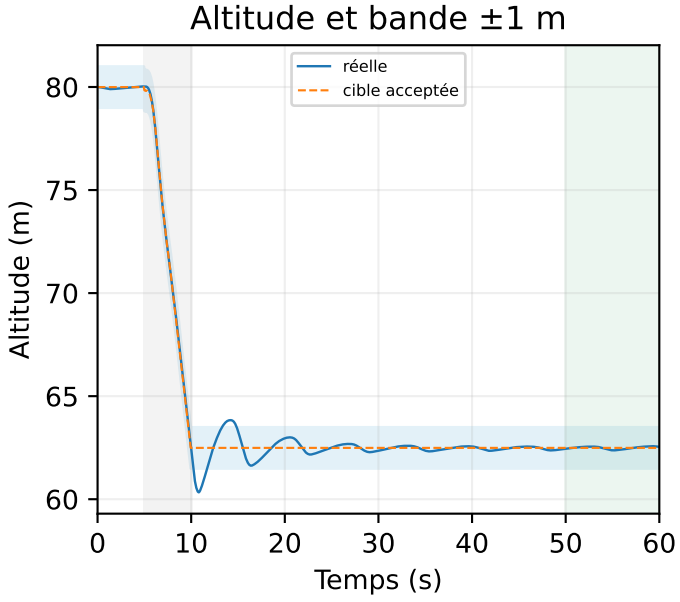

Erreur finale hauteur 0.943 m ; excursion finale 2.404 m ; assiette finale max 27.259° ; freinage — s. Critères échoués : tail_height_peak, tail_height_rms, tail_height_span, tail_tilt, tail_speed_rms, final_speed, transient_height.

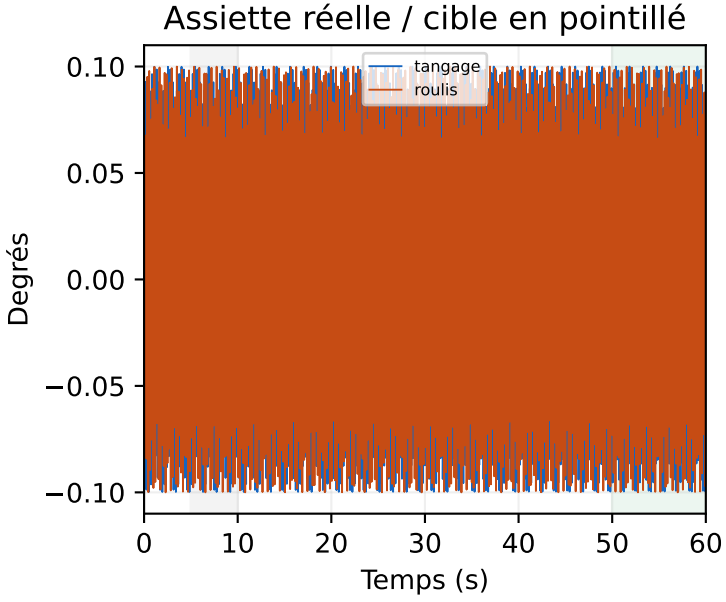

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

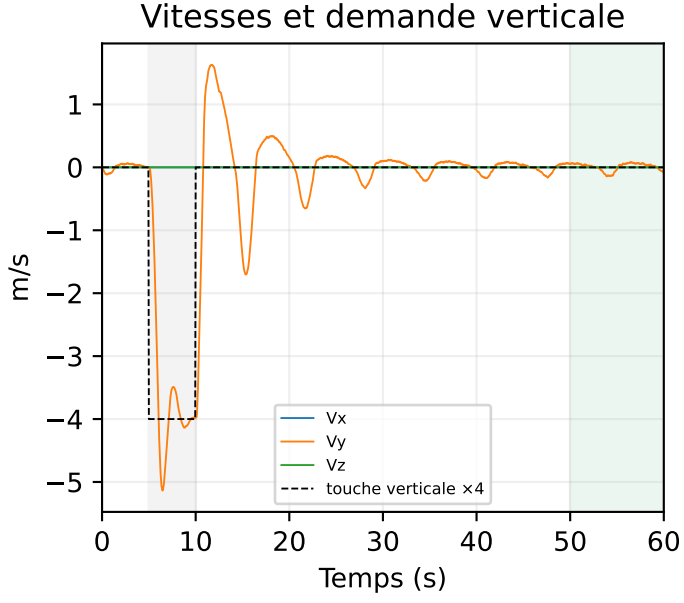

slow-radio / baseline / descend — FAIL

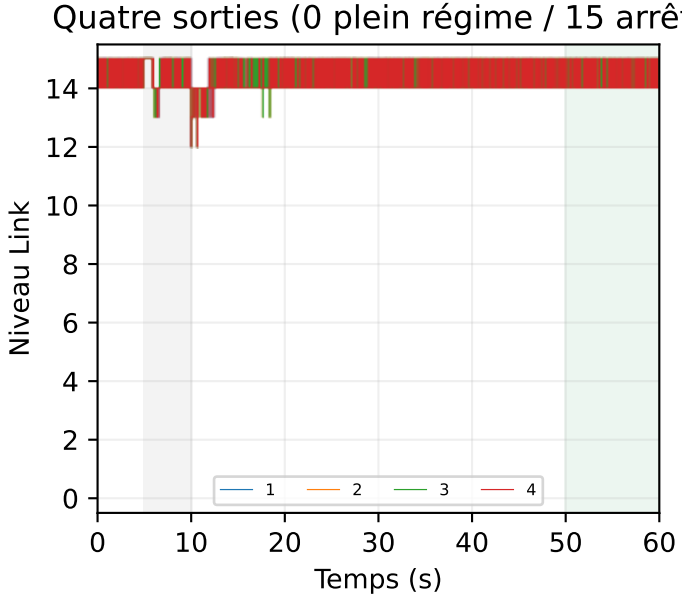

Shift entre 5 et 10 s, puis relâchement et maintien.

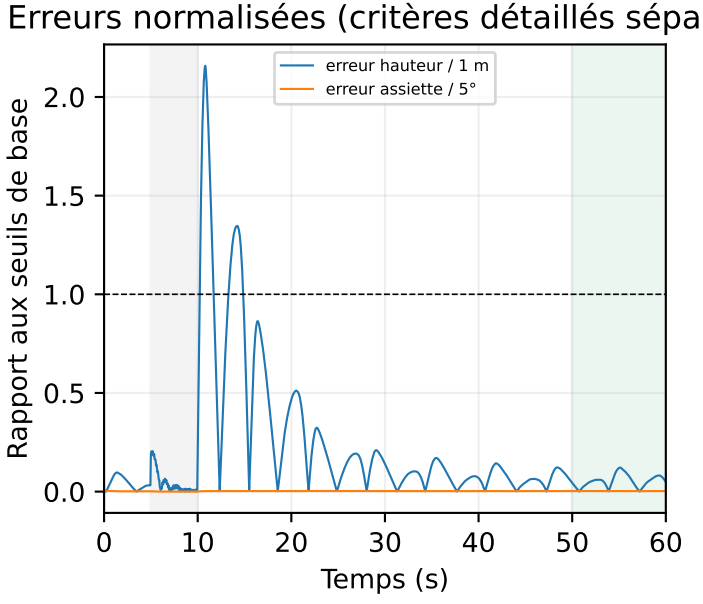

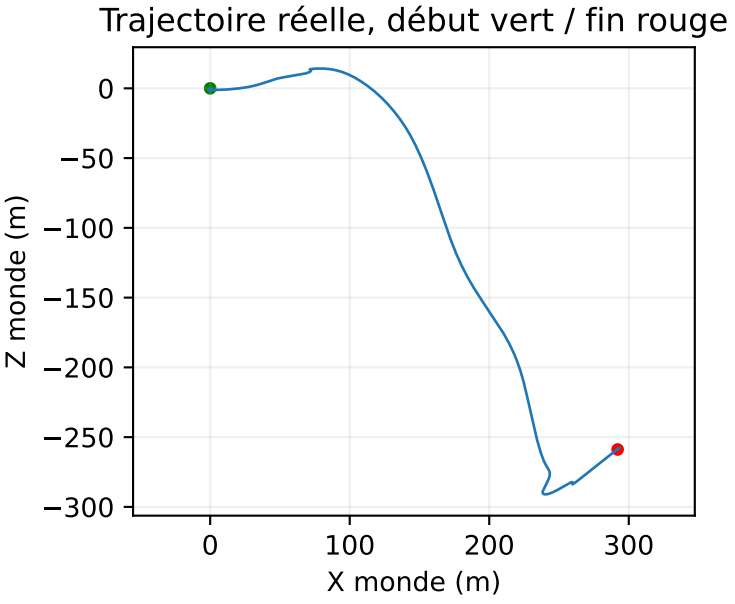

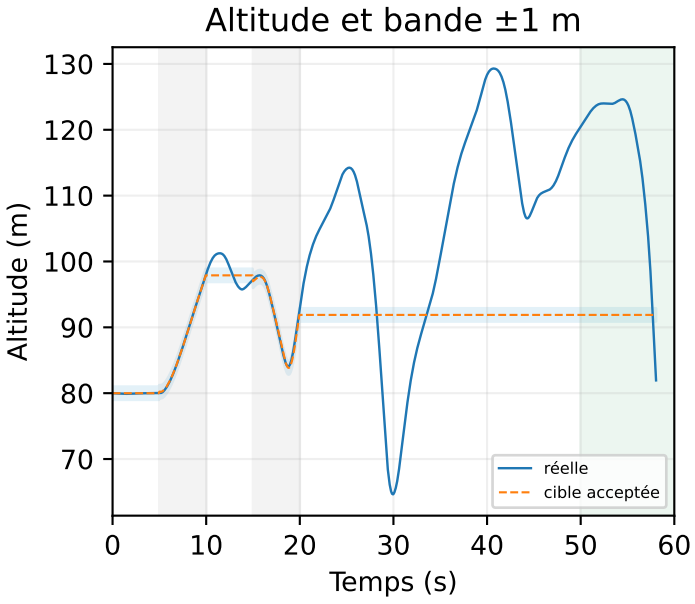

Erreur finale hauteur 0.048 m ; excursion finale 0.204 m ; assiette finale max 0.000° ; freinage — s. Critères échoués : transient_height.

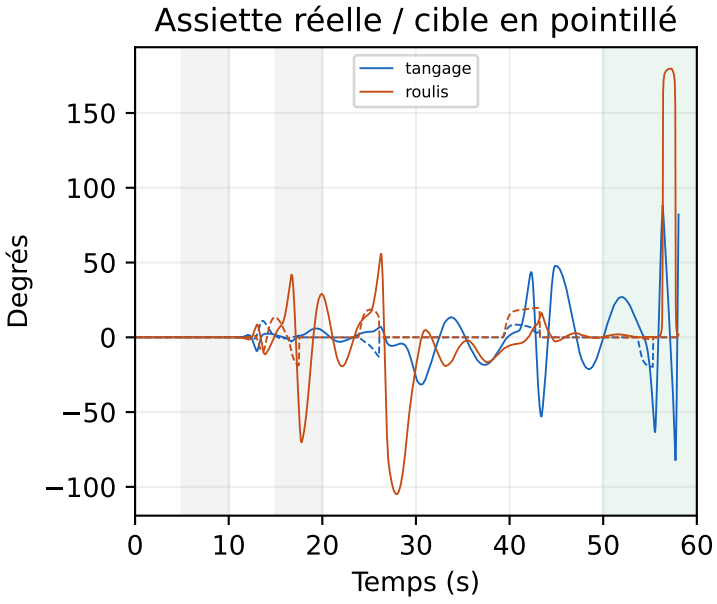

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

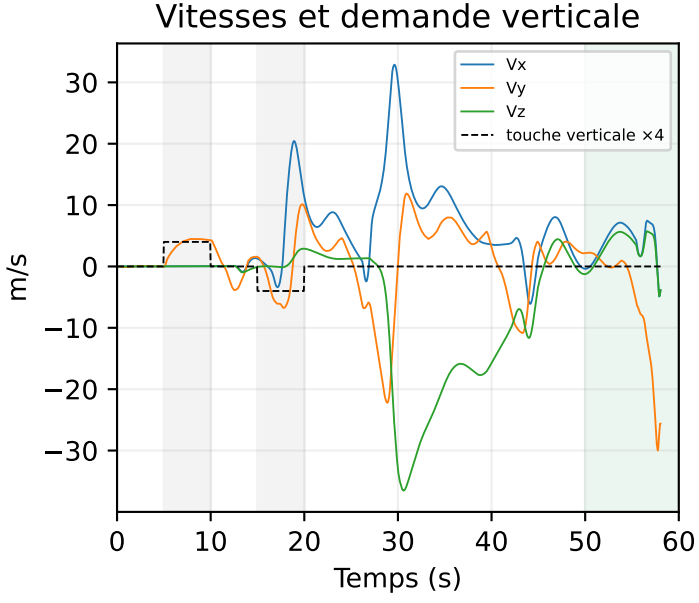

slow-radio / baseline / vertical-cycle — FAIL

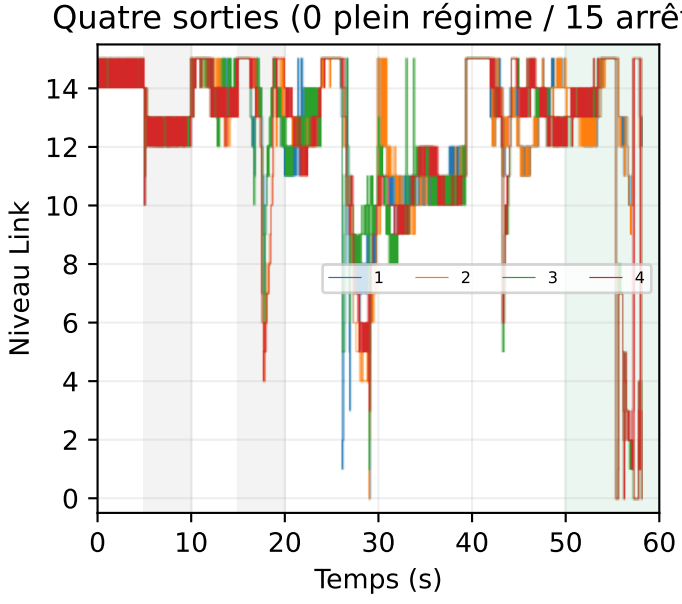

Espace de 5 à 10 s, maintien 10–15 s, Shift 15–20 s, puis maintien.

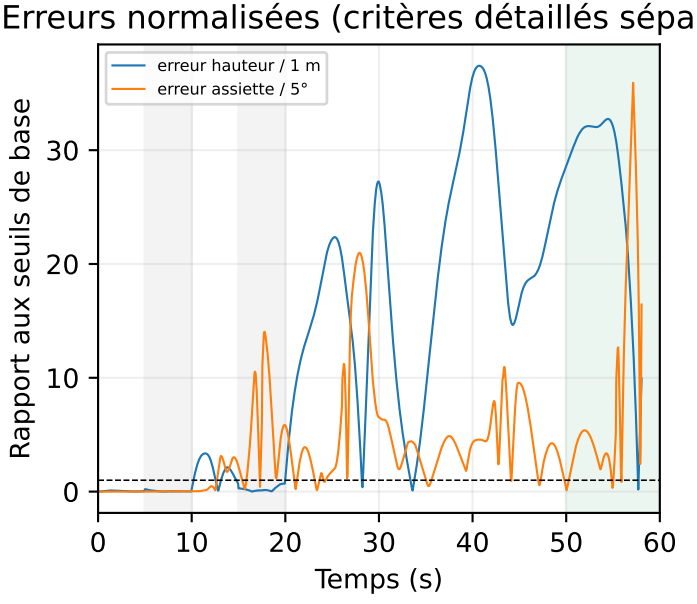

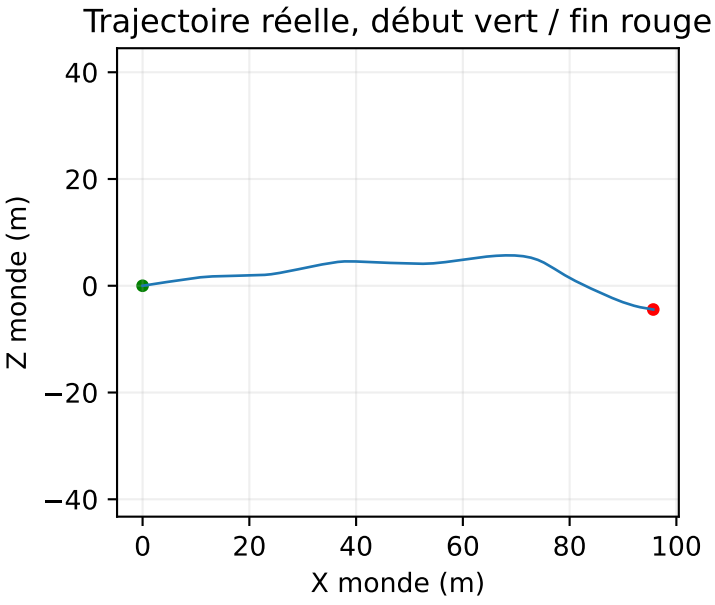

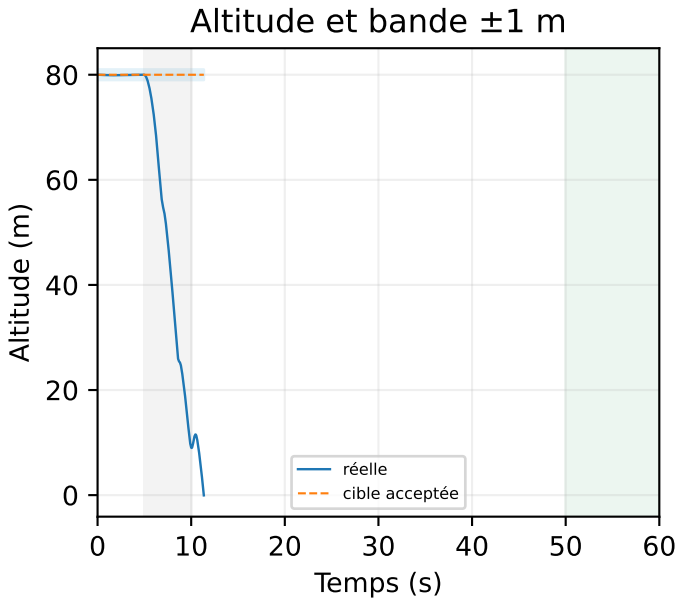

Erreur finale hauteur 9.944 m ; excursion finale 42.692 m ; assiette finale max 179.583° ; freinage — s. Critères échoués : complete, tail_height_peak, tail_height_rms, tail_height_span, tail_tilt, tail_speed_rms, final_speed, transient_height, transient_tilt, active_attitude, active_vertical_rate. Arrêt : Poussee indisponible

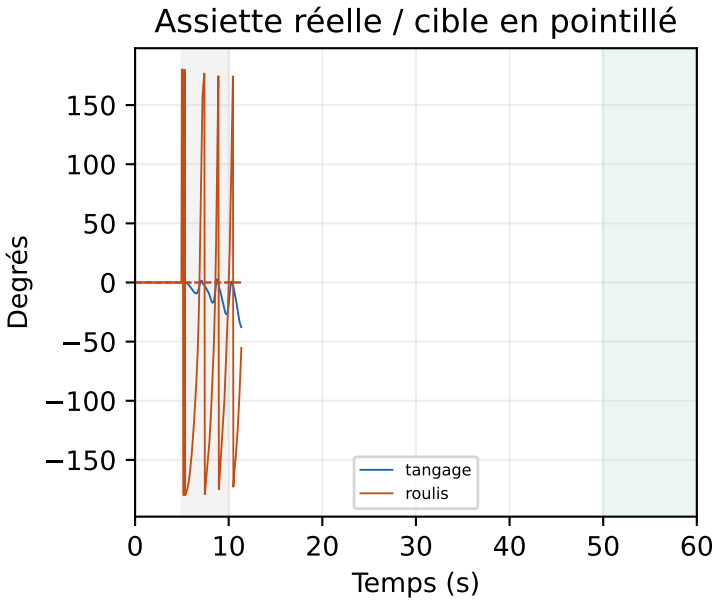

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

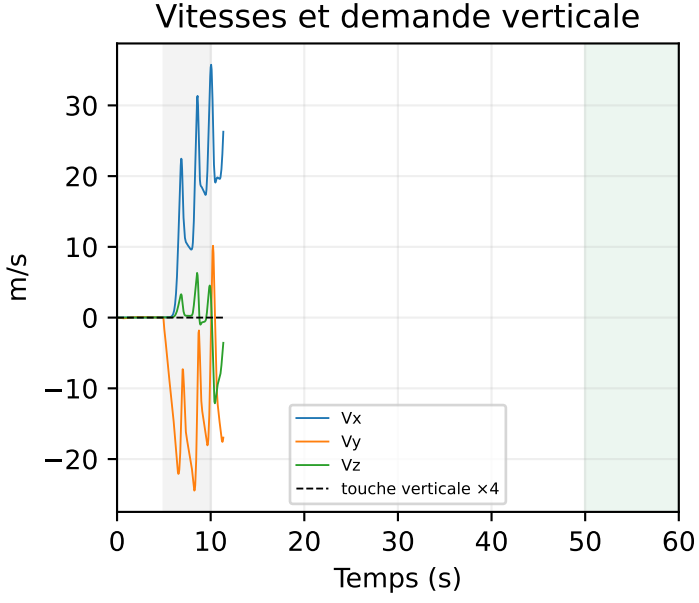

slow-radio / baseline / recovery-inverted — FAIL

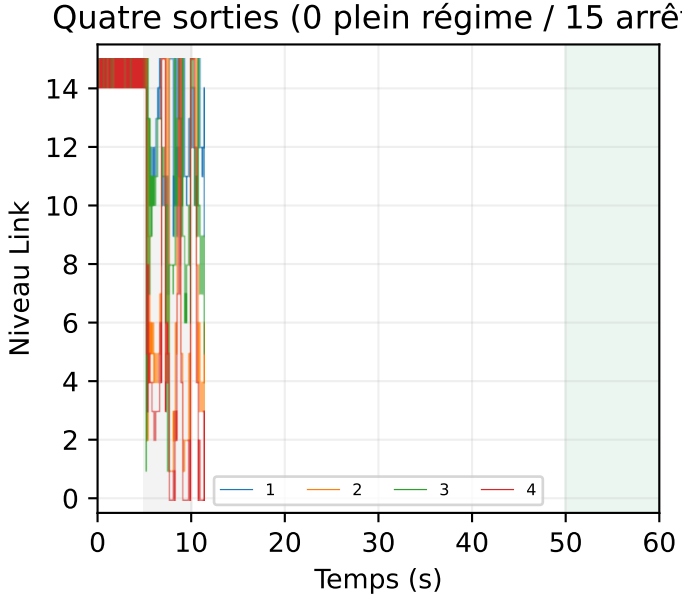

Aucune touche ; inversion instantanée de 180° à 5 s. Perte d’altitude publiée.

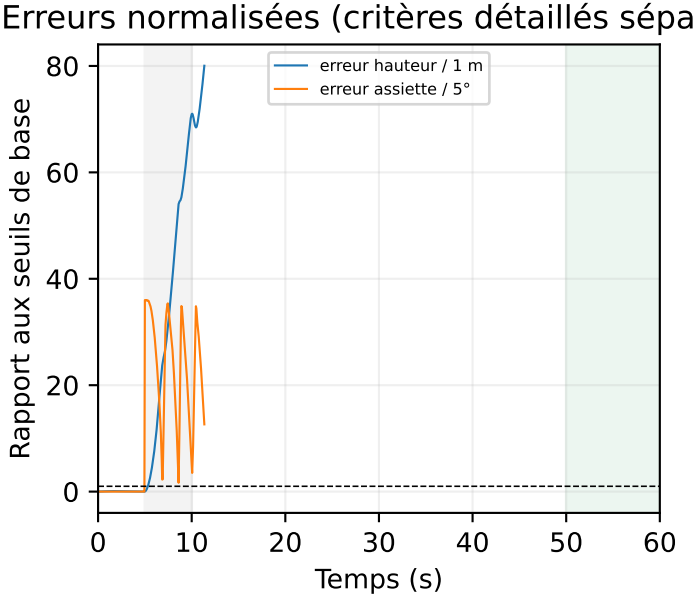

Erreur finale hauteur 80.039 m ; excursion finale — m ; assiette finale max —° ; freinage — s. Critères échoués : complete, tail_height_peak, tail_height_rms, tail_height_span, tail_tilt, tail_speed_rms, final_speed, transient_height, recovery. Arrêt : Declared simulation envelope crossed (ground y=0 / atmosphere y=315 / horizontal 5000m); no contact modeled

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.
