small-propellers / limited / hover — PASS

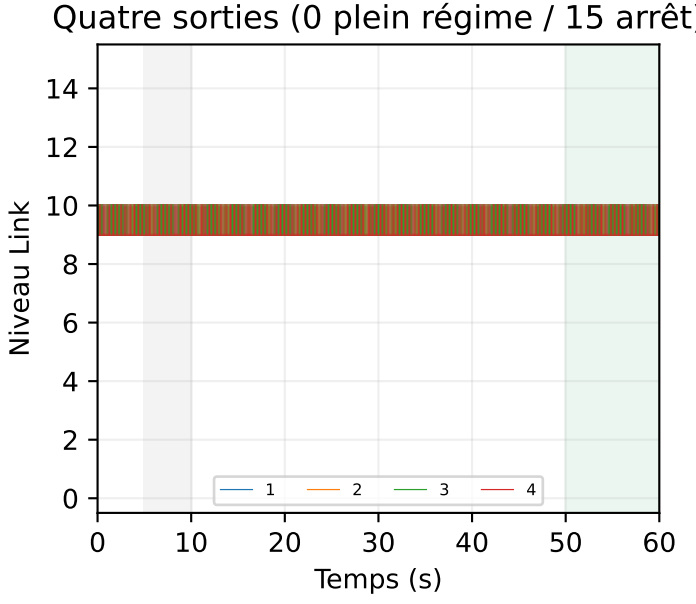

Maintien sans touche pendant toute la simulation.

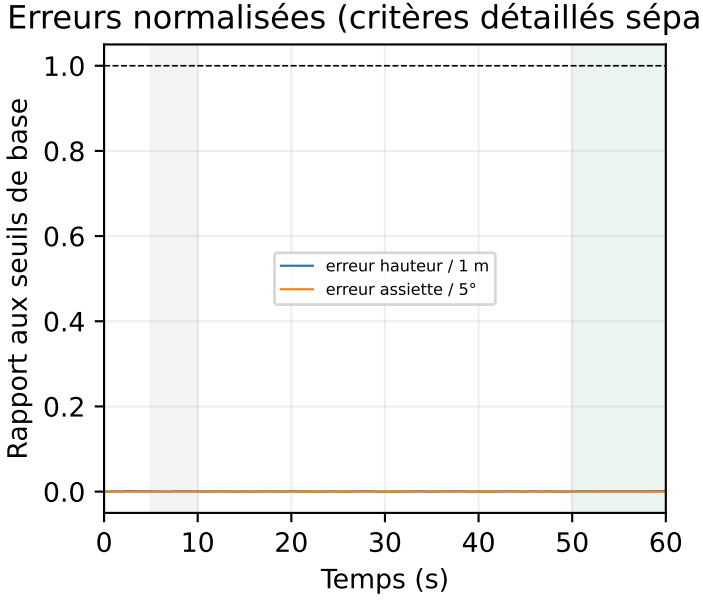

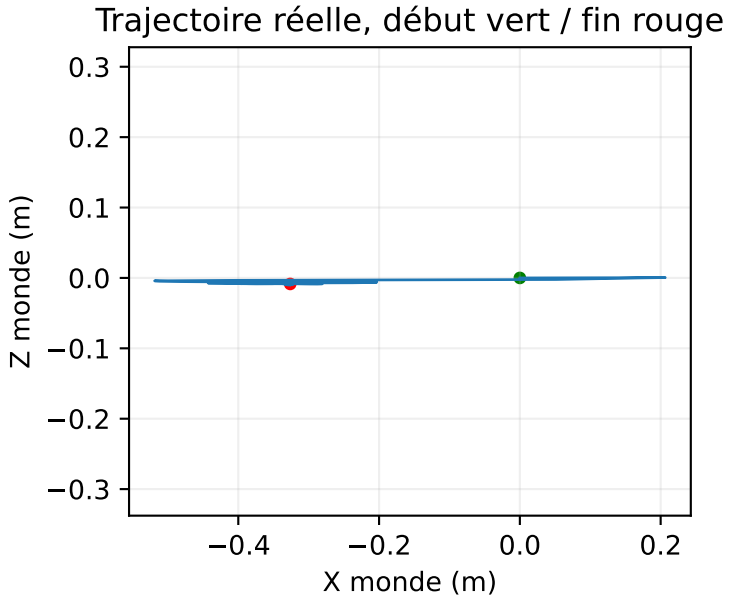

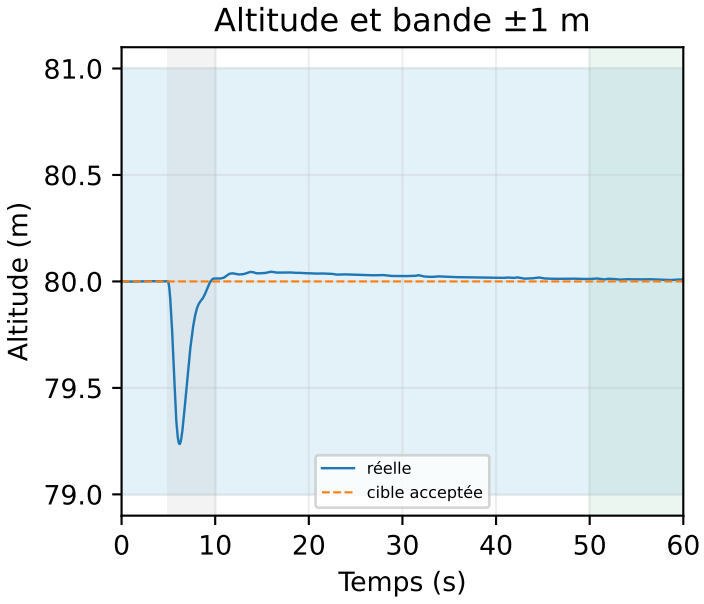

Erreur finale hauteur 0.001 m ; excursion finale 0.002 m ; assiette finale max 0.000° ; freinage — s. Critères échoués : aucun.

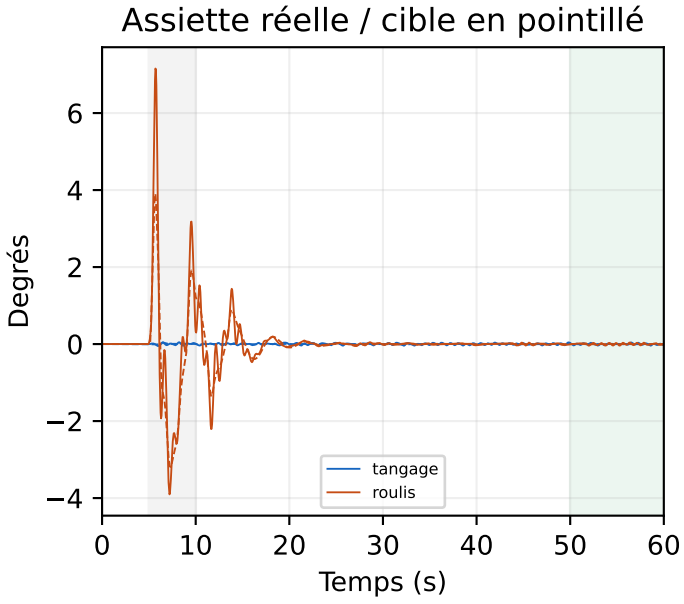

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

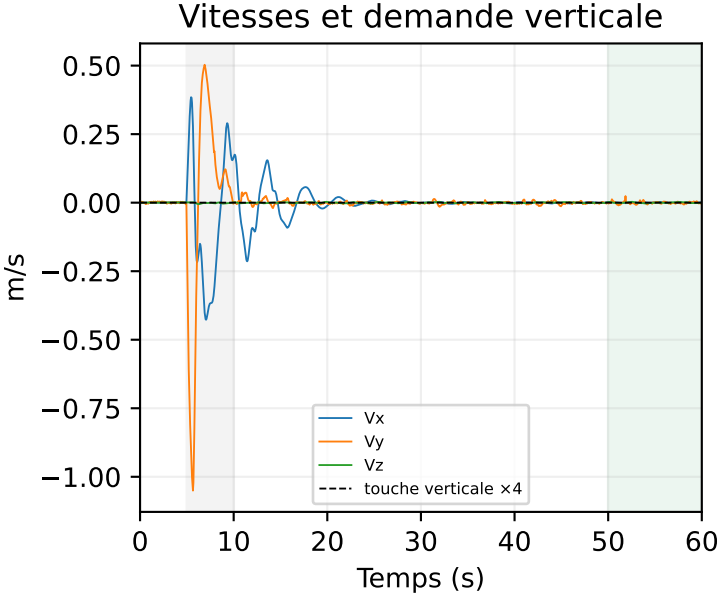

small-propellers / limited / load-swing — PASS

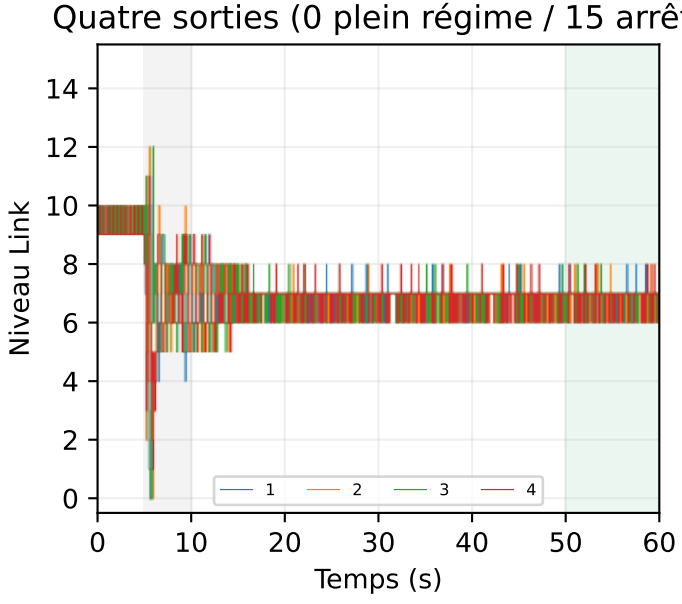

Aucune touche ; charge ponctuelle de 12 kg sur corde 5 m, inclinée initialement de 20°, ajoutée à 5 s.

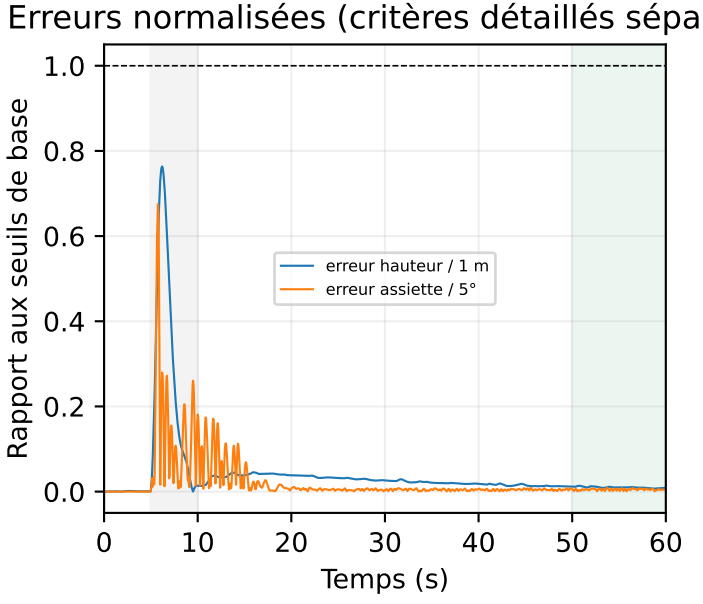

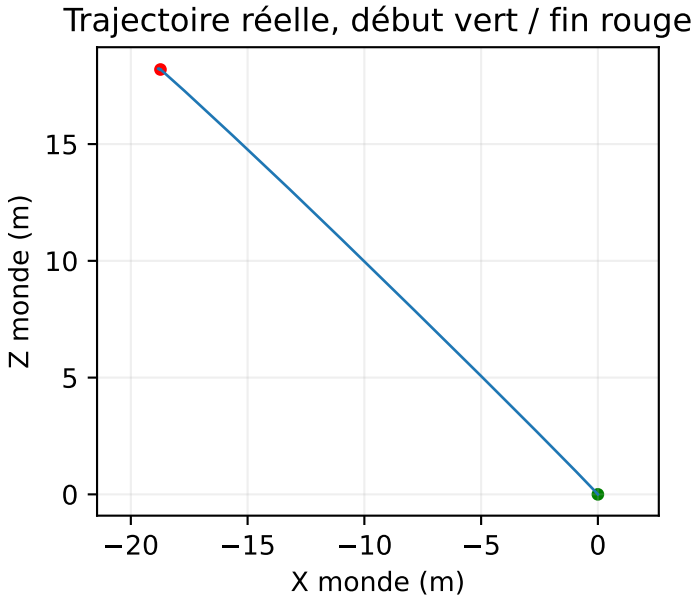

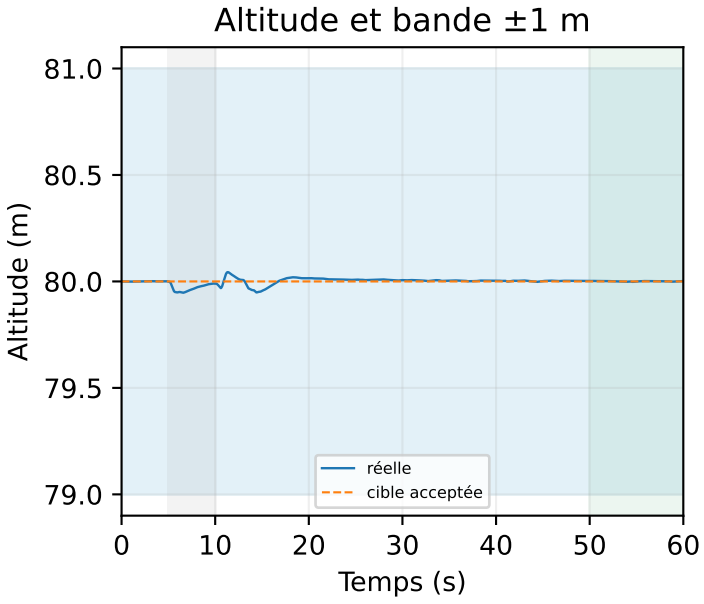

Erreur finale hauteur 0.009 m ; excursion finale 0.007 m ; assiette finale max 0.051° ; freinage — s. Critères échoués : aucun.

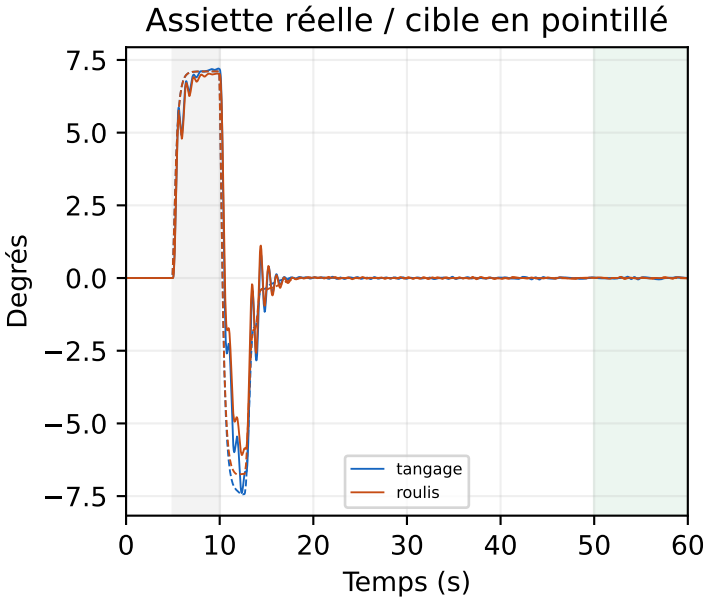

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

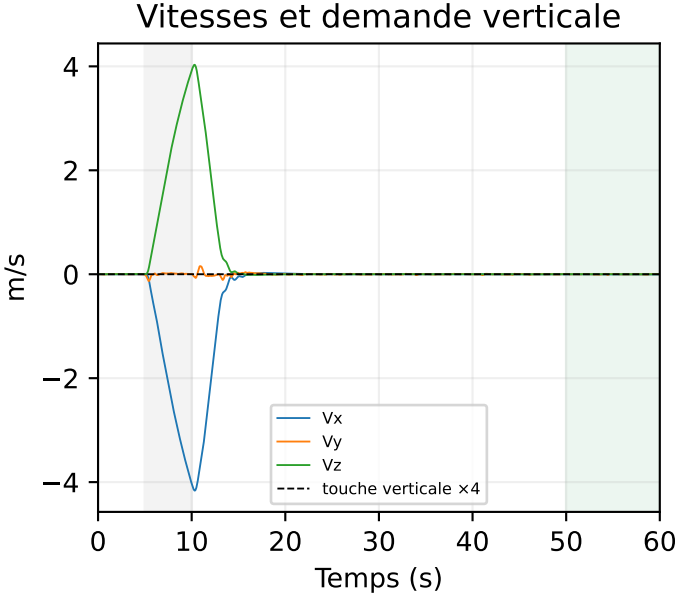

small-propellers / limited / forward-left — PASS

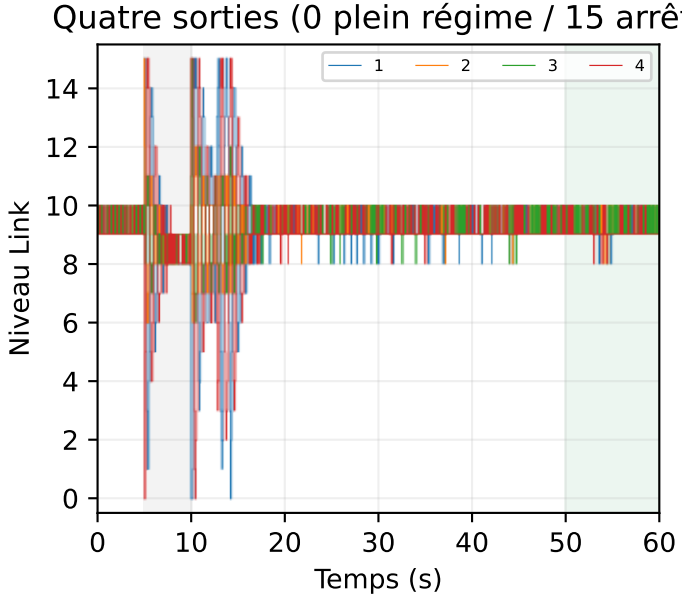

W+Q entre 5 et 10 s, mode déplacement latéral.

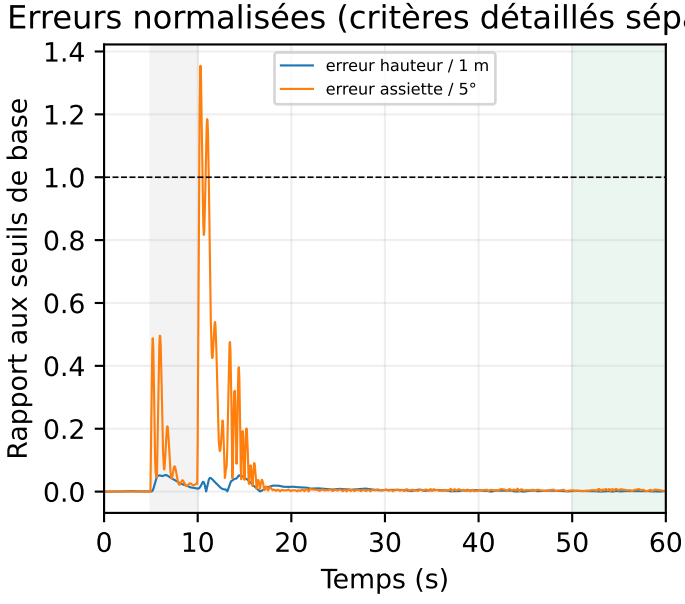

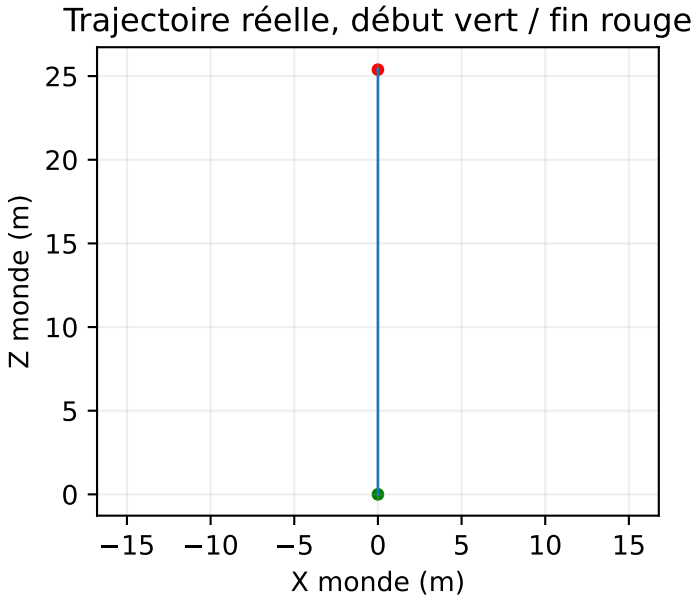

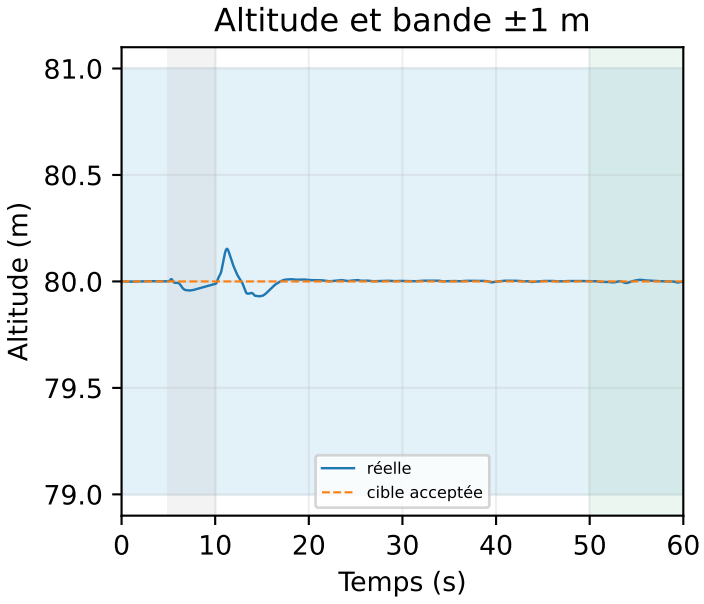

Erreur finale hauteur 0.002 m ; excursion finale 0.005 m ; assiette finale max 0.055° ; freinage 4.550 s. Critères échoués : aucun.

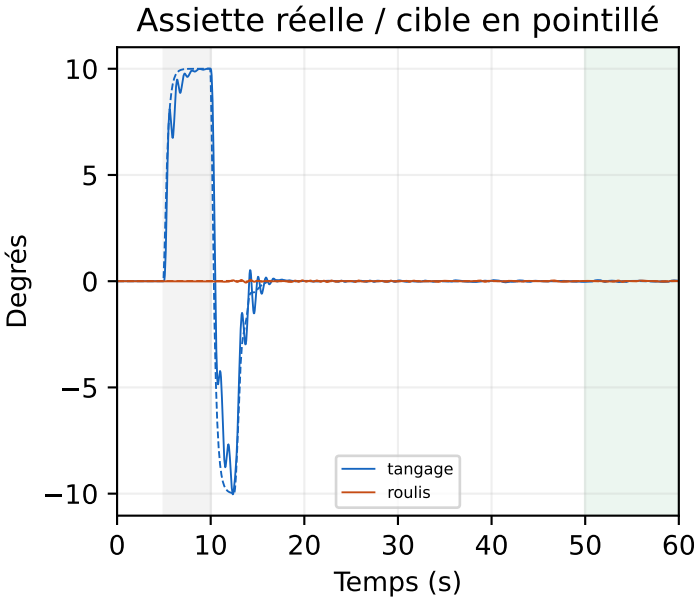

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

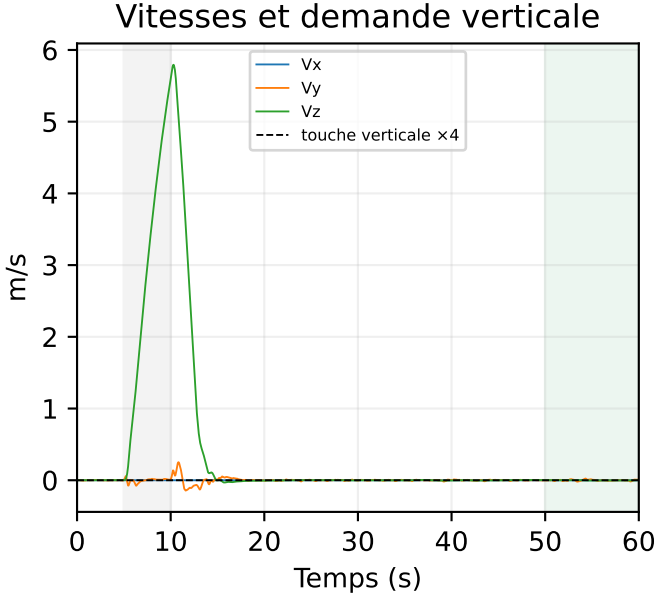

small-propellers / limited / brake — PASS

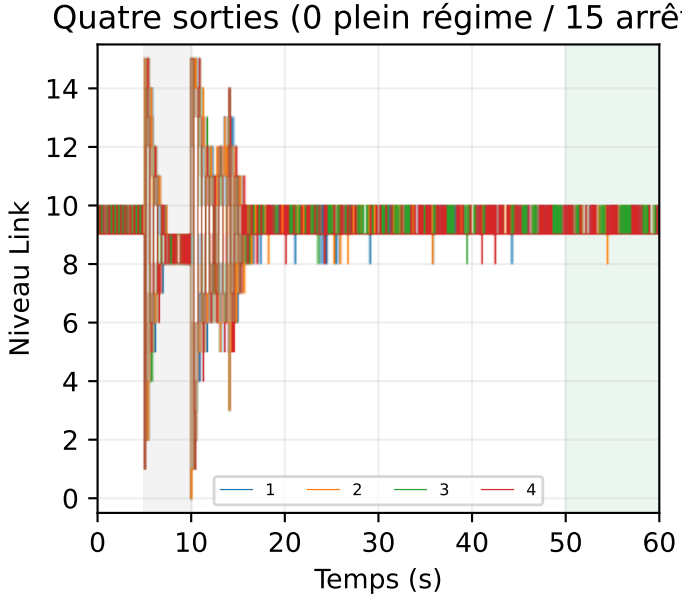

W de 5 à 10 s, relâchement, délai de freinage mesuré sur 15 observations consécutives.

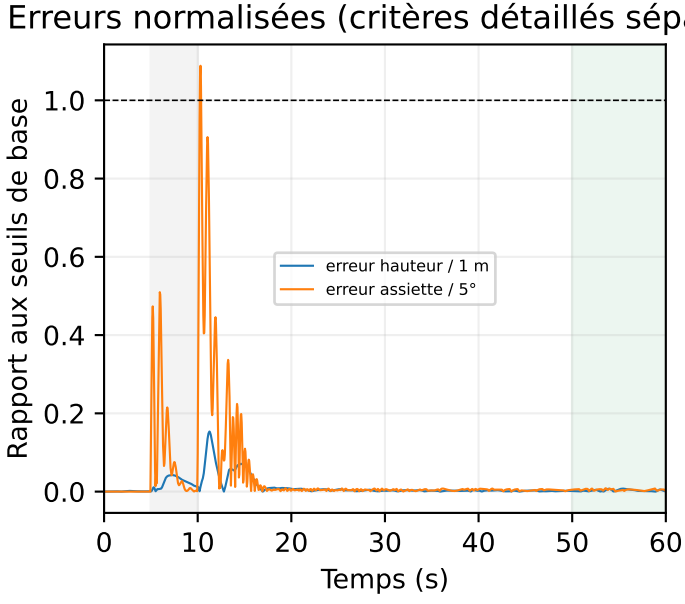

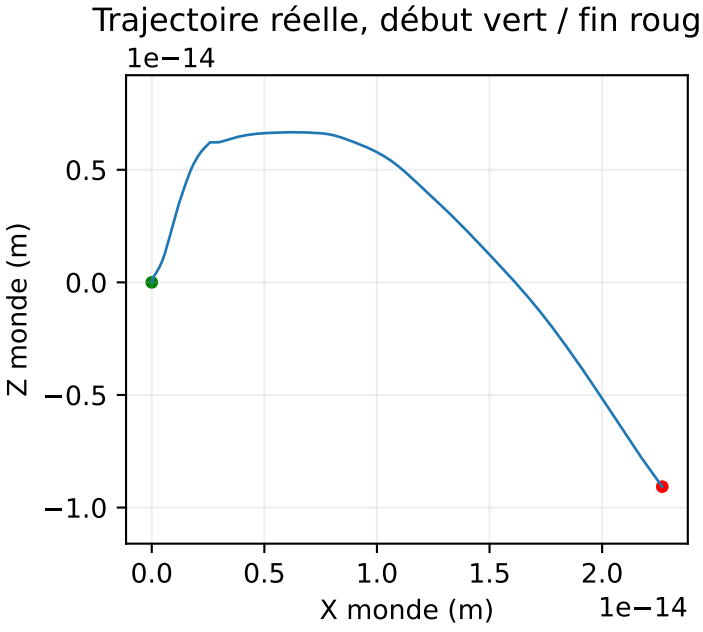

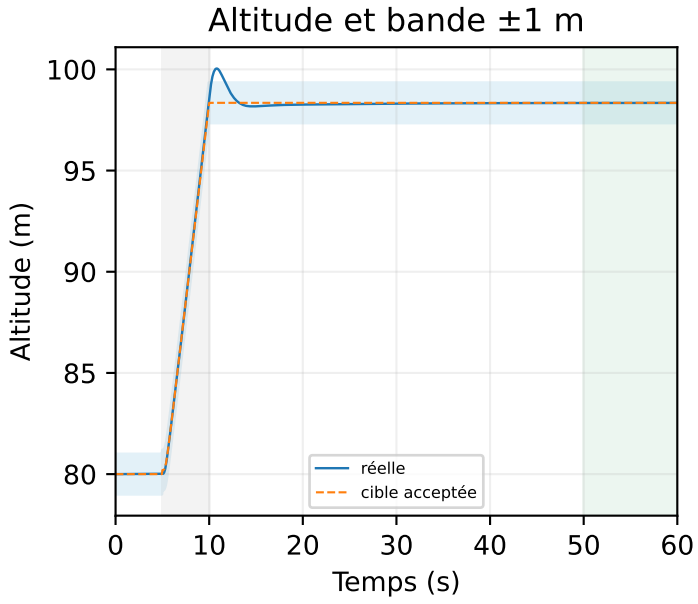

Erreur finale hauteur 0.000 m ; excursion finale 0.015 m ; assiette finale max 0.054° ; freinage 4.350 s. Critères échoués : aucun.

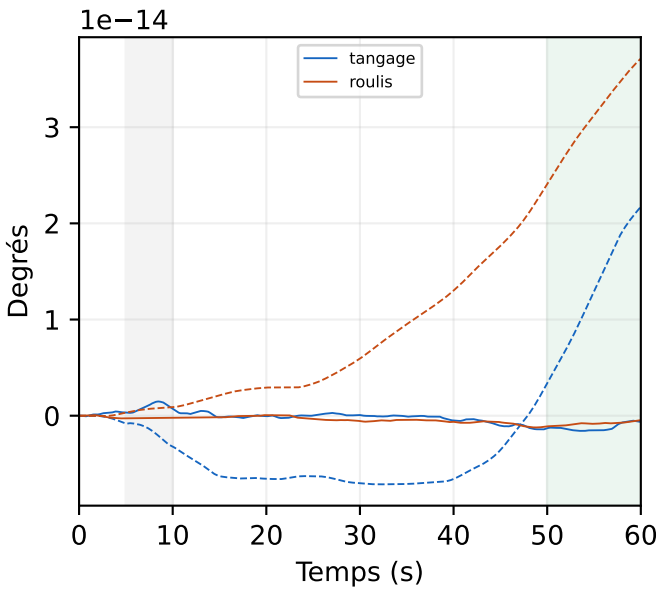

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

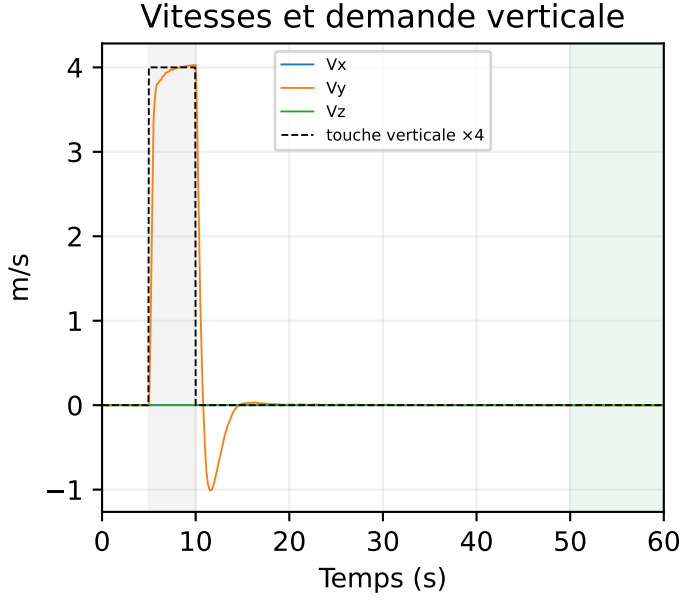

small-propellers / limited / climb — PASS

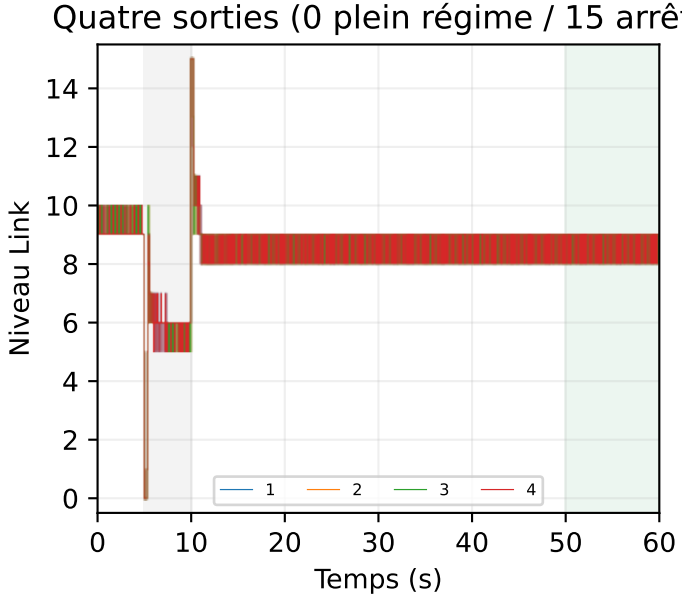

Espace entre 5 et 10 s, puis relâchement et maintien de la hauteur atteinte.

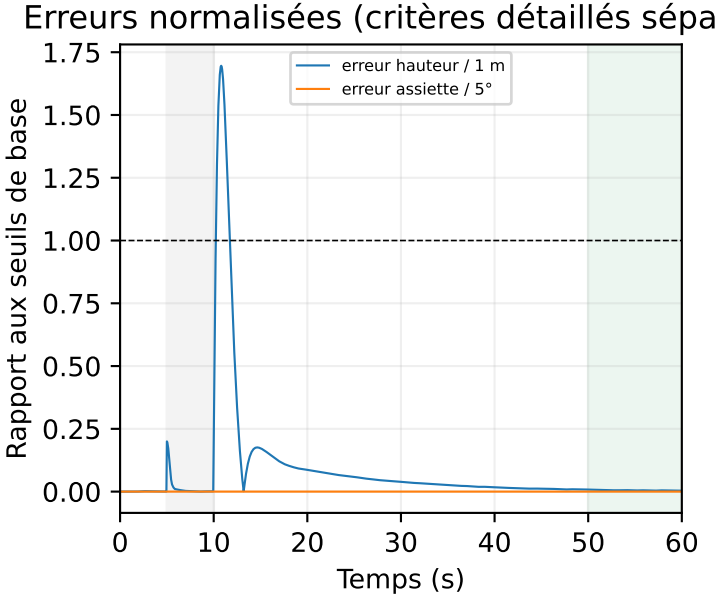

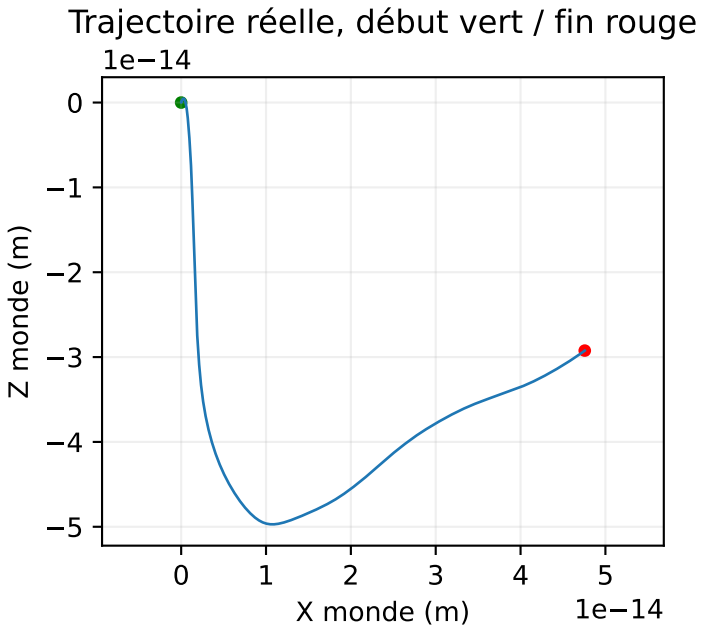

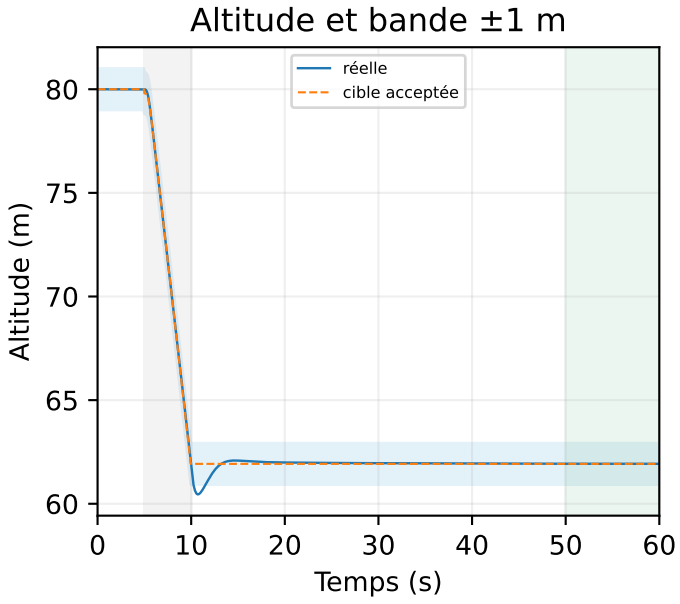

Erreur finale hauteur 0.004 m ; excursion finale 0.005 m ; assiette finale max 0.000° ; freinage — s. Critères échoués : aucun.

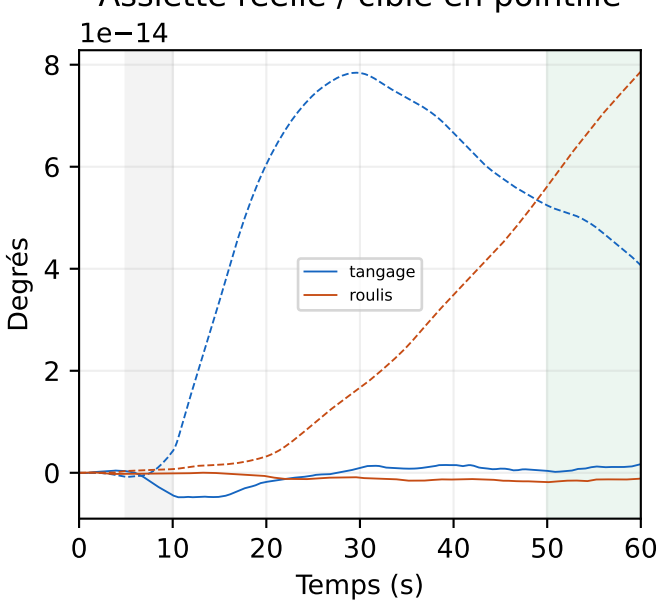

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

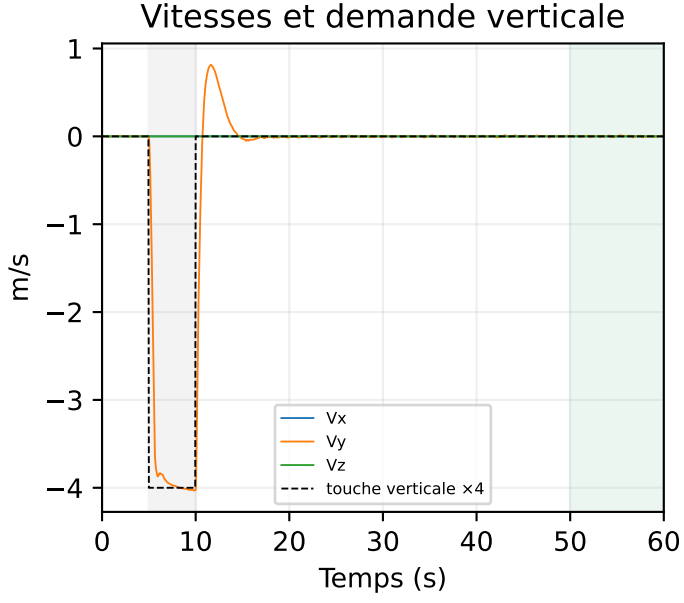

small-propellers / limited / descend — PASS

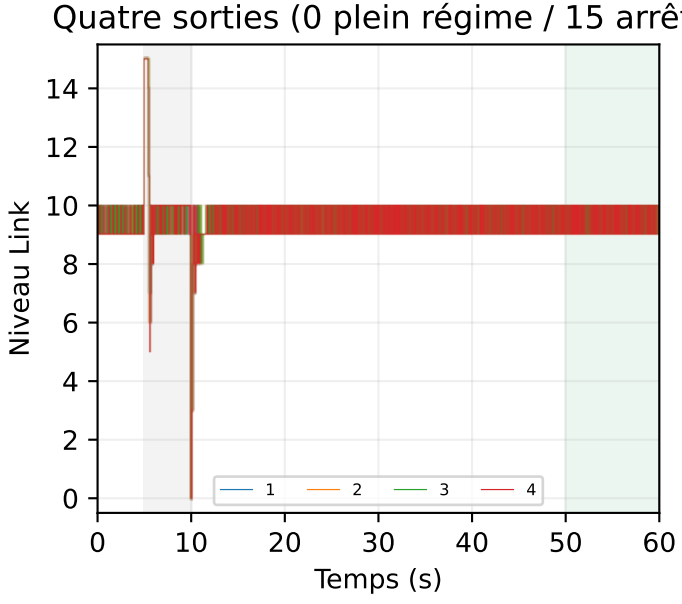

Shift entre 5 et 10 s, puis relâchement et maintien.

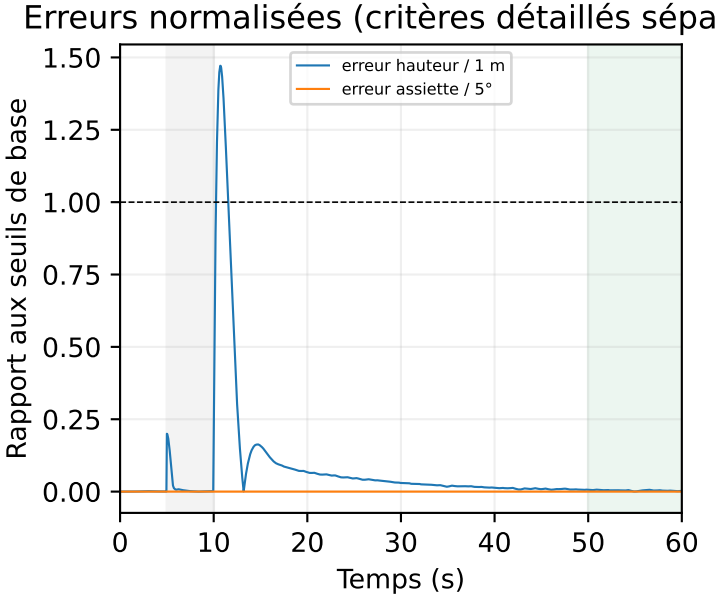

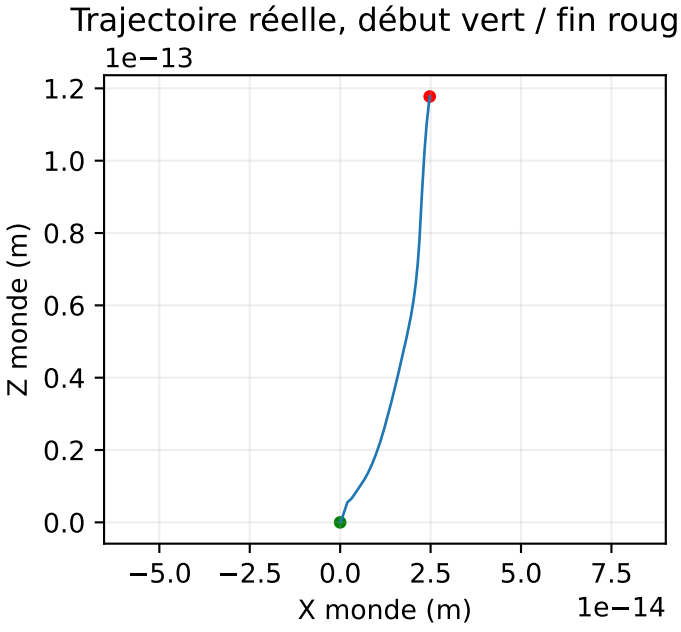

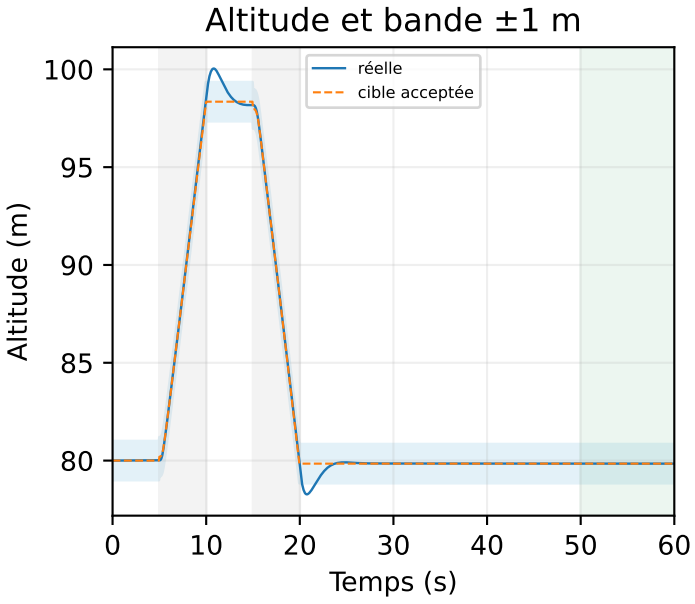

Erreur finale hauteur 0.002 m ; excursion finale 0.006 m ; assiette finale max 0.000° ; freinage — s. Critères échoués : aucun.

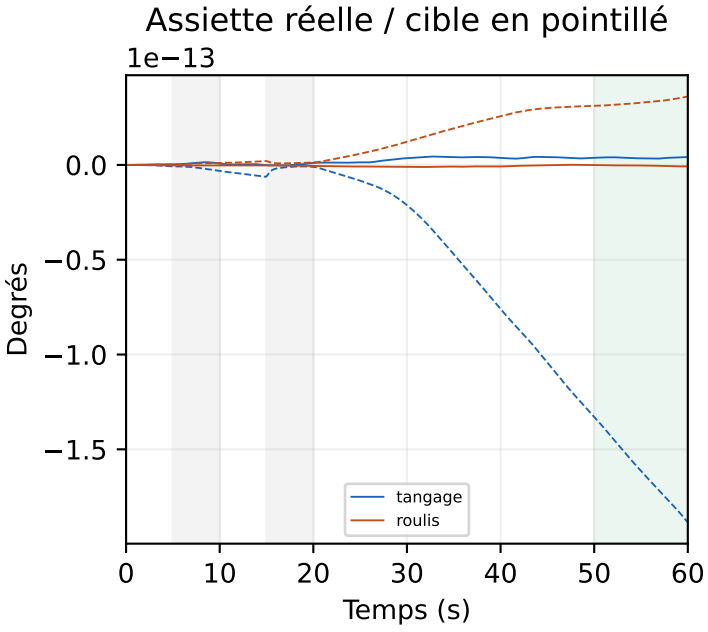

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

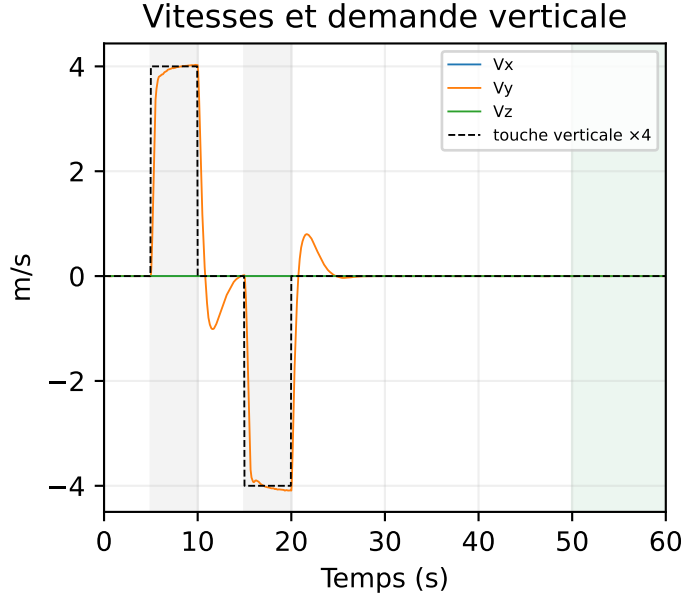

small-propellers / limited / vertical-cycle — PASS

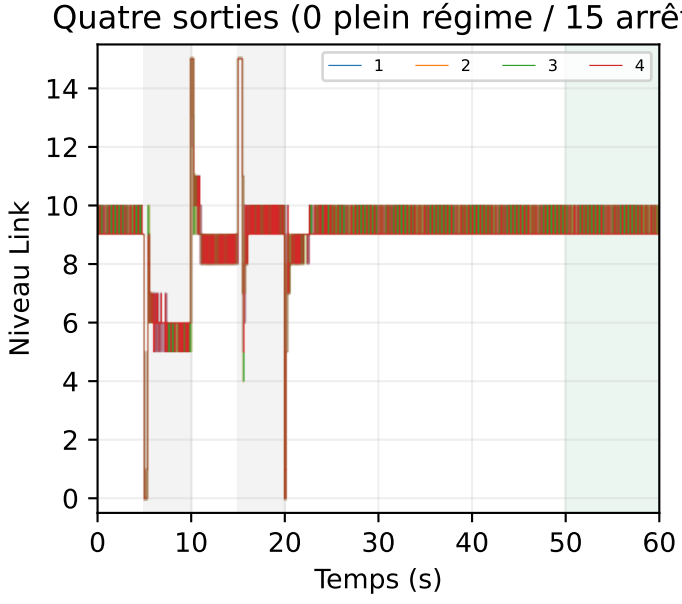

Espace de 5 à 10 s, maintien 10–15 s, Shift 15–20 s, puis maintien.

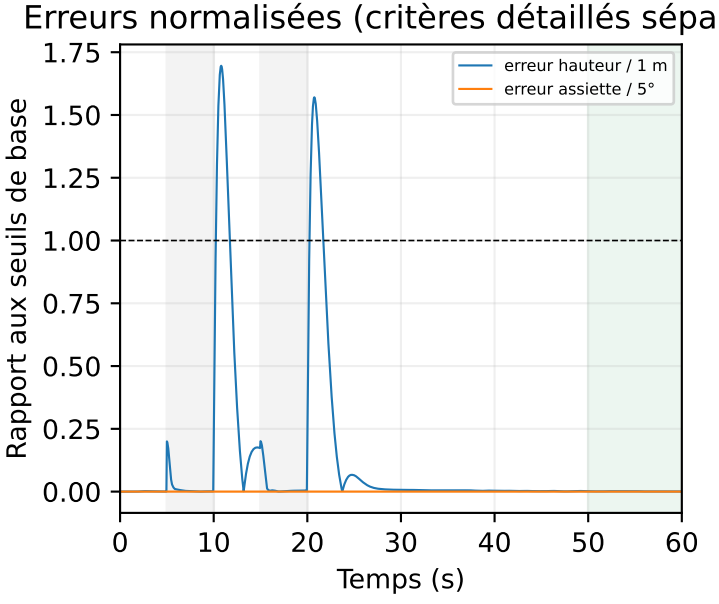

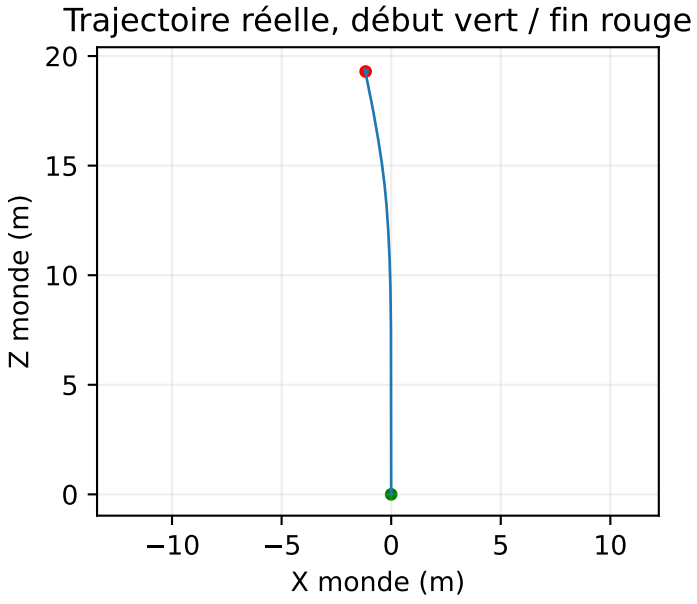

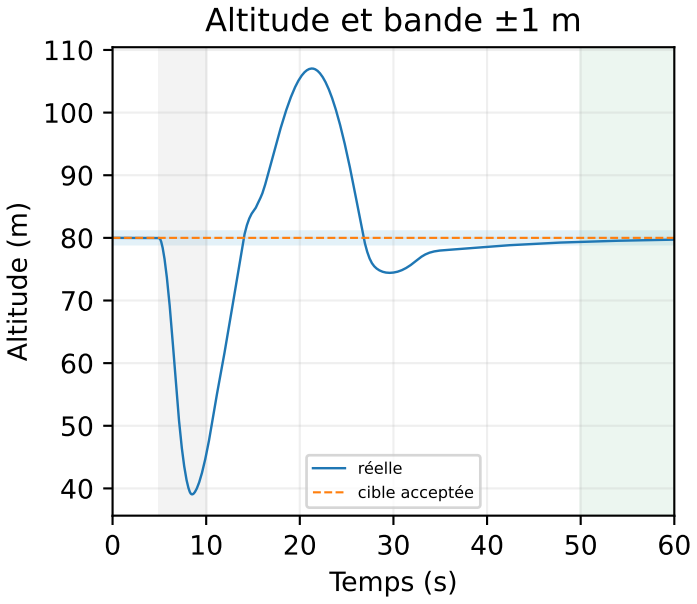

Erreur finale hauteur 0.000 m ; excursion finale 0.002 m ; assiette finale max 0.000° ; freinage — s. Critères échoués : aucun.

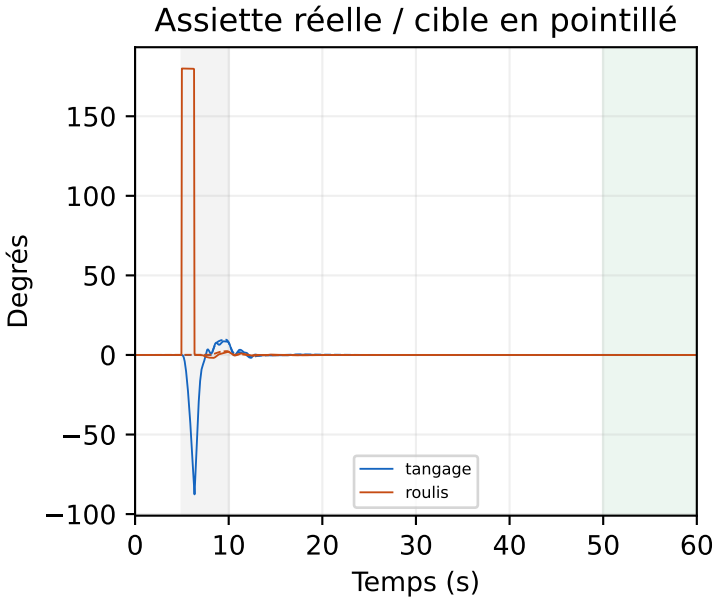

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.

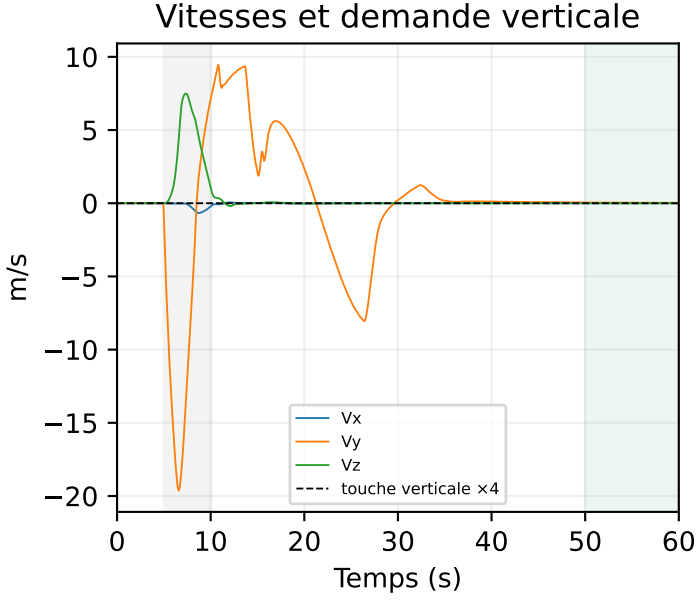

small-propellers / limited / recovery-inverted — FAIL

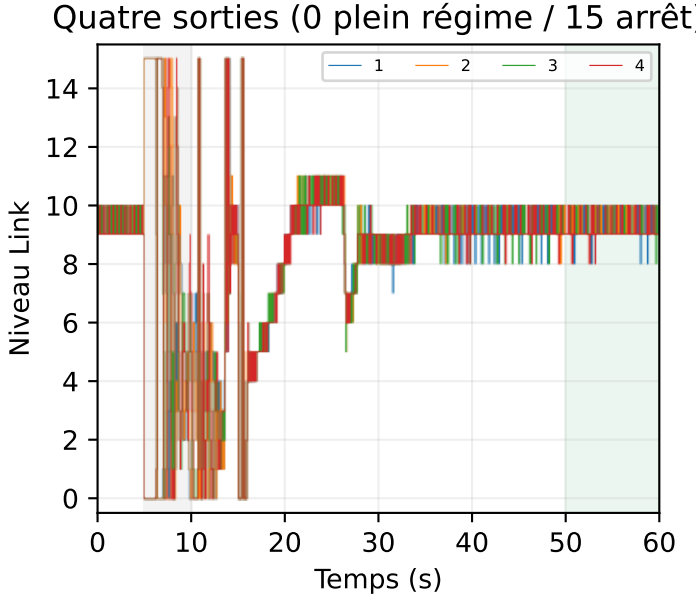

Aucune touche ; inversion instantanée de 180° à 5 s. Perte d’altitude publiée.

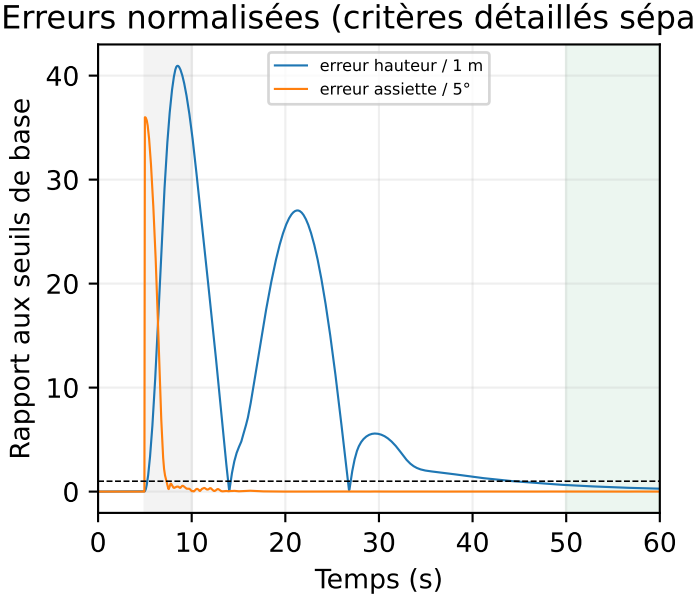

Erreur finale hauteur 0.282 m ; excursion finale 0.348 m ; assiette finale max 0.039° ; freinage — s. Critères échoués : transient_height, recovery.

Gris : commande principale. Vert : fenêtre finale de stabilité. Modèle synthétique ; aucune qualification Minecraft.
